Executive Summary

Content

Niagara York Road Inc. retained Paradigm Transportation Solutions Limited (Paradigm) to conduct this Multi-Development Transportation Impact Study (MD-TIS) for the Town of Niagara-on-the-Lake. This study intends to examine the effects of the expected developments around the Glendale Road and Queen Elizabeth Way (QEW) interchange in the Town of Niagara-on-the-Lake and determine any improvements as required.

Development Concepts

At the time of writing this report, there are currently 3 active development applications for the development area, including 524 York Road (Phase 2), proposed to be developed by Niagara York Road Inc. A summary of the expected developments includes approximately 2,095 residential units and 6,218 m² of commercial and retail space. The following provides details of each development:

- ▶ **253 Taylor Road** includes two mixed-use buildings, each containing two towers connected by a podium. A total of 810 residential units and 1,516 m² (16,313 sq. ft.) of ground floor commercial.
Phase 1 (Block 2) consists of 390 residential units in 21-storey and 17-storey towers, and Phase 2 (Block 1) consists of 420 residential units in 25-storey and 18-storey towers and the 1,516 m² of ground floor commercial development. For assessment purposes, the proposed development is anticipated to be constructed in two phases, with the first phase opening in 2027 and full build-out of the site by 2030.
Vehicle access to the overall site will be provided via the existing South and North driveways with Taylor Road. Closure of the Middle driveway is proposed with the planned site redevelopment. Access to the proposed residential buildings will be provided by constructing a new internal private roadway.
- ▶ **Phase 2** is located at 524 York Road, on the northeast corner of Glendale Avenue and York Road in the Town of Niagara-on-the-Lake.
The development proposes 227 hotel rooms and approximately 372 m² (4,004 sq. ft.) of restaurant uses served by a total parking supply of 268 vehicular and 26 bicycle parking spaces. Vehicle access is maintained via two driveway connections to

Counsell Street and Glendale Avenue through the existing shared east/west drive aisle bisecting the Phase 1 and 2 lands.

Build-out is anticipated to occur in one phase by 2030, but the timing is subject to market conditions.

- **Parcels 6 and 7** are located in the Town of Niagara-on-the-Lake. Parcel 6 is located at the northwest corner of York Road and Townline Road, and Parcel 7 is located at the southwest corner of York Road and Townline Road.

Parcel 6 proposes 744 residential units, 2650 m² (28,524 sq. ft.) of retail use, and 1680 m² (18,083 sq. ft.) of commercial use. Vehicle access for Parcel 6 is proposed via two driveway connections to Townline Road, approximately 125 m and 240 m north of the intersection with York Road. A total of 800 vehicular parking spaces are provided.

Parcel 7 is proposing 541 residential units. Vehicular access to Parcel 7 is proposed via a single driveway connection to York Road, approximately 105 m west of the intersection with Townline Road. A total of 522 vehicular parking spaces are provided.

Build-out is anticipated to occur in three phases in 2030, 2032, and 2034, and the timing is subject to market conditions.

Phase 1 includes 384 high-rise residential units, 690 m² (7,427 sq. ft.) of commercial use, and 1770 m² (19,052 sq. ft.) retail use in Parcel 6. Phase 2 includes 250 mid-rise residential units and 990 m² (10,656 sq. ft.) commercial use in Parcel 6. Parcel 7 contains 365 high-rise residential units. Phase 3 comprises 110 mid-rise residential units and 880 m² (9,472 sq. ft.) retail use in Parcel 6. Parcel 7 includes 176 mid-rise residential units.

Conclusion

The main findings and conclusions of this study are as follows:

- ▶ **Existing Traffic Operations:** During the AM and PM peak hours at York Road and Townline Road intersections, the northbound movement is expected to operate in the LOS D to LOS E range. In the Saturday peak hour, the westbound QEW Off-Ramp and eastbound QEW Off-Ramp movements operate with high delays.
- ▶ **253 Taylor Road Site Generated Traffic:** Phase 1 is forecast to generate approximately 105, 125, and 147 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Upon full build-out, the site is estimated to generate 253 AM peak hour trips, 333 PM peak hour trips, and 379 Saturday peak hour trips.
- ▶ **524 York Road – Phase 2 Site Generated Traffic:** The subject site is forecast to generate approximately 144, 176, and 208 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.
- ▶ **524 York Road – Parcel 6 Site Generated Traffic:** Phase 1 is forecast to generate approximately 170, 273, and 293 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Phase 2 is forecast to generate approximately 292, 397, and 400 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Phase 3 is forecast to generate approximately 65, 118, and 106 new vehicle trips during the AM, PM, and Saturday peak hours. Upon full build-out, the parcel is forecast to generate approximately 357, 515, and 506 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.
- ▶ **524 York Road – Parcel 7 Site Generated Traffic:** Phase 2 is forecast to generate approximately 99, 118, and 140 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Phase 3 is forecast to generate approximately 66, 69, and 71 new vehicle trips during the AM, PM, and Saturday peak hours. Upon full build-out, the parcel is forecast to generate approximately 165, 187, and 211 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.
- ▶ **Background Traffic Operations:** Accounting for background growth, the critical movements identified in the existing traffic horizon are forecast to further degrade with the anticipated increase in non-site related traffic. Additional new critical movements are noted at the York Road and Glendale Avenue,

York Road and Townline Road, Glendale Avenue and QEW Westbound Off-Ramp and Glendale Avenue and QEW Eastbound Off-Ramp.

- ▶ **Total Traffic Operations:** With site-generated traffic, additional critical movements are noted at the York Road, Counsell Street Townline Road and South Site Driveway intersections.
- ▶ **Traffic Signal Control:** Traffic signals are not warranted at any study area intersection.
- ▶ **Auxiliary Turn Lanes:** Left turn lanes are warranted at the south site driveway and north site driveway on Townline Road under 2032 and 2039 conditions, respectively. The northbound left-turn lanes are recommended to provide a minimum of 25 metres for the intersection with the south site driveway and 15 metres for the intersection with the north site driveway to accommodate the forecast future traffic volumes based upon reported operations. Implementing a two-way left-turn lane would satisfy both storage requirements. An eastbound left turn lane is warranted under base year conditions on York Road at Townline Road. A left-turn lane is recommended if the preferred remedial measure of a roundabout is not implemented at this intersection.
- ▶ **Intersection Improvements:** The following intersection improvements are identified to remediate the noted critical movements:
 - **York Road and Glendale Avenue:** Add a two-lane east leg to the existing roundabout under 2030 conditions.
 - **York Road and Counsell Street:** Restrict the southbound movement to right out only once Counsell Street is extended northerly.
 - **York Road and Townline Road:** Convert the stop-controlled intersection to a roundabout under 2030 conditions.
 - **Glendale Avenue (Southbound) and QEW Westbound Off-Ramp:** Implementing an additional westbound turning lane and converting the stop-controlled off-ramp to signal control is recommended under 2027 conditions.
 - **Glendale Avenue (Northbound) and QEW Eastbound Off-Ramp:** Implementing an additional eastbound turning lane and converting the stop-controlled off-ramp to signal control is recommended under base-year conditions.
 - **York Road & Site Driveway:** Restrict the northbound site driveway to right-in/right-out.

Recommendations

Based on the findings of this study, it is recommended that:

- ▶ The Town of Niagara-on-the-Lake implement the active transportation and transit facilities identified within the *Glendale Secondary Plan*;
- ▶ Changes in real-world traffic volumes should be monitored, and
- ▶ The noted intersection improvements should be implemented to facilitate the developments.

1 Introduction

1.1 Overview

Niagara York Road Inc. retained Paradigm Transportation Solutions Limited (Paradigm) to conduct this Multi-Development Transportation Impact Study (MD-TIS) for the Town of Niagara-on-the-Lake. This study intends to examine the effects of the expected developments around the Glendale Road and Queen Elizabeth Way (QEW) interchange in the Town of Niagara-on-the-Lake and determine any improvements as required.

At the time of writing this report, there are currently 3 active development applications for the development area, including 524 York Road (Phase 2), proposed to be developed by Niagara York Road Inc. A summary of the expected developments includes approximately 2,095 residential units and 6,218 m² of commercial and retail space. The following provides details of each development. **Figure 1.1** illustrates the site locations.

The scope of the study includes:

- ▶ An assessment of the current traffic and site conditions within the study area;
- ▶ Estimates of background traffic growth;
- ▶ Estimates of additional traffic generated by the subject site;
- ▶ Analyses of the impact of the future traffic on the surrounding road network; and
- ▶ Recommendations to mitigate the site-generated traffic in a satisfactory manner, if required.

Appendix A contains the pre-study consultation material and responses from the Town of Niagara-on-the-Lake, the Niagara Region, and the Ministry of Transportation, Ontario (MTO). The study generally follows the MTO's *Traffic Impact Study Guideline*¹ and the Niagara Region's *Transportation Impact Assessment Guidelines*.²

The study area intersections assessed in this study include:

- ▶ Glendale Avenue and Hilton Garden Inn/Site Driveway (unsignalized);
- ▶ Counsell Street and Site Driveway Driveway (unsignalized);
- ▶ Glendale Avenue and York Road (roundabout);
- ▶ York Road and Counsell Street (unsignalized);
- ▶ York Road and Townline Road (unsignalized);
- ▶ QEW and Glendale Avenue North Ramp (signalized);
- ▶ QEW and Glendale Avenue South Ramp (signalized);
- ▶ Glendale Avenue and Lampman Court (unsignalized);
- ▶ Glendale Avenue and Taylor Road (signalized);
- ▶ Townline Road and the proposed North Site Driveway (unsignalized);
- ▶ Townline Road and the proposed South Site Driveway (unsignalized); and
- ▶ York Road and the proposed Site Driveway (unsignalized).

¹ *Traffic Impact Study Guideline*, Ministry of Transportation, Ontario, September 2014.

² *Transportation Impact Assessment Guidelines*, Niagara Region, July 2023.

2 Existing Conditions

2.1 Road Network

The roadways of interest within the study area include:

- ▶ **Glendale Avenue** is a north-south arterial road. The road has a four-lane urban cross-section, providing two travel lanes in each direction with a centre median south of the intersection with York Road. North of this intersection, the road has a two-lane urban cross-section. The road has a speed limit of 50 km/h. The road operates under the jurisdiction of the Niagara Region.
- ▶ **York Road** is an east-west arterial road. The road has an urban cross-section ranging from two to four lanes. The road has a posted speed limit of 60 km/h. The road operates under the jurisdiction of the Niagara Region.
- ▶ **Counsell Street** is a north-south local road. The road has a two-lane rural cross-section. The road has a statutory speed limit of 50 km/h. The road operates under the jurisdiction of the Town of Niagara-on-the-Lake.
- ▶ **Townline Road** is a north-south local road. The road has a two-lane rural cross-section. The road has a posted speed limit of 50 km/h. The road operates under the jurisdiction of the Town of Niagara-on-the-Lake.
- ▶ **Queen Elizabeth Way (QEW)** is a 400-series controlled access highway. The freeway has a six-lane, median-divided cross-section with three travel lanes in each direction. The road has a posted speed limit of 100 km/h. The road operates under the jurisdiction of the MTO.
- ▶ **Lampman Court** is an east west local road. The road has a two-lane rural cross-section. The road has a posted speed limit of 50 km/h. The road operates under the jurisdiction of the Town of Niagara-on-the-Lake.
- ▶ **Taylor Road** is an east-west arterial road. The road has a four-lane urban cross-section, providing two travel lanes with a centre median in each direction. The road has a speed limit of 60 km/h. The road operates under the jurisdiction of the Niagara Region.

Figure 2.1 illustrates the existing lane configurations and traffic control at the study area intersections.

The *Glendale Secondary Plan Transportation Assessment* completed by LEA Consulting Ltd. in November 2024 identifies a proposed extension of Counsell Street northward, eventually connecting to

Townline Road to the east.³ Due to the uncertain nature of the extension, this improvement was not considered in any of the operational analyses.

The plan also identifies the intersection of York Road and Glendale Avenue as a Major Gateway and identifies the intersection of York Road and Townline Road as a Character Gateway.

³ LEA Consulting Ltd., *Glendale Secondary Plan Transportation Assessment*, (Markham, November 2024)

2.2 Pedestrian and Cycling Network

Pedestrian facilities are provided along the following roadways within the study area:

- ▶ **Glendale Avenue** has a multi-use path that originates on the west side of the road at the intersection with York Road. The multi-use path transitions to the boulevard's centre at the northern on/off ramps and then to the east side of the road at the southern on/off ramps.
- ▶ **Taylor Road**, north of Glendale Avenue, has a buffered sidewalk on the west side of the road.

Pedestrian signal heads, with push buttons and delineated crosswalks, are provided at the intersections of the signalized study area.

Cycling facilities are provided along the following roadways within the study area:

- ▶ **Glendale Avenue** has a multi-use path that originates on the west side of the road at the intersection with York Road. The multi-use path transitions to the boulevard's centre at the northern on/off ramps and then to the east side of the road at the southern on/off ramps.
- ▶ **Taylor Road**, north of Glendale Avenue, has bicycle lanes on both sides of the road.

The *Glendale Secondary Plan Transportation Assessment* identifies future active transportation facilities on York Road, Glendale Avenue north of York Road, and Townline Road.⁴

Figure 2.2 illustrates the existing and proposed cycling network for the area.

⁴ LEA Consulting Ltd., *Glendale Secondary Plan Transportation Assessment*, (Markham, November 2024).

2.3 Transit Service

Niagara Transit operates the public transit system in the Niagara Region. No fixed transit routes operate near the 524 York Road subject site. The subject site is served via the shared-ride service, Microtransit, from 7:00 a.m. to 11:00 p.m. on weekdays and Saturdays.⁵ **Figure 2.3** illustrates the Direct Service Zone.

Figure 2.4 illustrates the existing transit network near 253 Taylor Road.⁶ Two transit routes serve the subject site:

- ▶ **Route 40** travels from Niagara Falls to St. Catharines. This route operates on weekdays and Saturdays from the early morning until late evening. Weekday and weekend headways operate in the order of approximately 15 to 60 minutes. Express routes run from Niagara Falls to the Niagara College, Daniel J. Patterson Campus in Niagara-on-the-Lake (NOTL) Campus and from the Niagara College NOTL Campus to St. Catharines.
- ▶ **Route 45** travels from St. Catharines to Niagara Falls. This route operates on weekdays and Saturdays from the early morning until late evening. Weekday and weekend headways operate in the order of approximately 5 to 60 minutes. Express routes run from Niagara Falls to the Niagara College NOTL Campus and from the Niagara College NOTL Campus to St. Catharines.

Two bus stops exist within a 500-metre radius of 253 Taylor Road. The closest bus stops are on the Niagara College NOTL Campus, south of the site.⁷ The walking time to these stops is approximately fifteen minutes and can be accessed using the existing sidewalk infrastructure.

The *Glendale Secondary Plan Transportation Assessment* indicates that a future transit hub is being explored in the Glendale community. Potential locations include north of the QEW carpool lot and north of Lampman Court.⁸

Existing Transit Network

2.4 Traffic Volumes

2.4.1 Glendale Avenue Corridor

MTO provided Paradigm with traffic counts completed in August 2024 along the Glendale Corridor, including the diverging diamond interchanges, the roundabout at York Road, and the conventional intersections at Lampman Court and Taylor Court. Additionally, Paradigm has collected Saturday traffic counts along the Glendale Avenue Corridor from August 2024. Speed and travel time data were obtained from the SMATS iNode platform for model calibration and validation.

2.4.2 Regional/Local Intersections

Pyramid Traffic Inc. collected existing traffic counts at Glendale Avenue and Hilton Driveway, York Road at Counsell Street, and York Road at Townline Road on November 14, 2024, for weekday and Saturday conditions. It is noted that movements travelling to and from Counsell Street cul-de-sac have been reclassified to better reflect their true movement patterns.

2.4.3 Volume Balancing

The traffic data used for this study was collected from multiple sources and at different times. As a result, a volume-balancing exercise was undertaken to ensure internal consistency across the study network and to provide a reliable basis for analysis.

Volume balancing involved reconciling observed turning movement counts at key intersections with available corridor and approach volumes. Where discrepancies were identified, adjustments were applied in a controlled and proportional manner to align intersection movements with overall traffic patterns, while preserving the observed directional splits and relative turning proportions.

This process ensured that traffic volumes entering and exiting the network were balanced and that the resulting datasets reflected a coherent snapshot of typical operating conditions during the analysis periods. The balanced volumes were subsequently used as inputs to the operational and simulation analyses presented in this report.

Figures 2.5 – 2.7 illustrate the base weekday AM, PM, and Saturday peak hour volumes. **Appendix B** contains the existing count data and signal timing plan.

Figure 2.6

Base Traffic Volumes Saturday Peak Hour

2.5 Traffic Operations

Intersection level of service (LOS) is a recognized method of quantifying the efficiency of traffic flow at intersections. It is based on the delay experienced by individual vehicles executing the various movements. The delay is related to the number of vehicles wanting to make a movement, compared to the estimated capacity for that movement. The capacity is based on several criteria related to the opposing traffic flows.

The highest possible rating is LOS A, under which the average total delay is equal or less than 10 seconds per vehicle. When the average delay exceeds 80 seconds at signalized intersections (50 seconds at unsignalized intersections), the movement is considered to have a LOS F, and remedial measures are usually implemented if they are feasible.

The intersection analysis considered three separate measures of performance:

- ▶ The LOS for each turning movement. LOS is based on the average control delay per vehicle;
- ▶ The volume to capacity (v/c) ratio for movements and overall intersection; and
- ▶ 95th percentile queue length (metres).

Under the Region's *TIS Guidelines*, the operational analysis must include identification of signalized and unsignalized intersections where:

- ▶ v/c ratios movements that exceed 0.85 and/or LOS E at a signalized intersection;
- ▶ LOS, based on average delay per vehicle on individual movements, which operate at LOS D or greater for unsignalized intersections; and
- ▶ The 95th percentile queues for an individual movement that are projected to exceed the available turning lane storage.

The MTO *TIS Guidelines* stipulates that:

- ▶ The critical threshold for ramp terminal movements is a v/c ratio threshold of 0.75 for the consideration of mitigation measures.
- ▶ At signalized intersections, movements with a volume/capacity (v/c) ratio greater than 0.85 are deemed to be "critical" in terms of operations.

The evaluation criteria used to analyze signalized and unsignalized intersections are based on the Highway Capacity Manual (HCM)⁹ 2000 procedures output from Synchro 12 software.

2.5.1 Synchro Traffic Operations

Synchro 12 was utilized to analyze the site driveway intersections and intersections under the jurisdiction of the Niagara Region or Town of Niagara-on-the-Lake and are not on the Glendale Avenue corridor.

The operations of the intersections in the study area were evaluated using the existing lane configuration, signal timings, and traffic control along with the existing traffic volumes, including the calculated crossing pedestrians and heavy vehicle percentages.

Table 2.1 and **Table 2.2** summarize the level of service conditions. In general, the study area intersections operate with an acceptable level of service, and all movements are within capacity. One exception is noted in the PM peak hour at the York Road and Townline Road intersection. The northbound approach operates with a v/c ratio of 0.03, 43-second delay, and LOS E.

Appendix C contains the detailed Synchro 12 reports.

⁹ Transportation Research Board, *Highway Capacity Manual*, Washington, D.C. 2003.

2.6 Vissim Model

A detailed traffic operations analysis was undertaken using PTV Vissim to assess existing traffic conditions along the Glendale Avenue corridor within the study area. Vissim is a microscopic simulation model that evaluates individual vehicle movements and interactions, allowing for a more refined assessment of operational performance under varying traffic demands and network constraints.

The Vissim model was provided by the MTO and was further developed by Paradigm to reflect existing roadway geometry, lane configurations, traffic control devices, signal timing plans, and observed traffic volumes. Balanced traffic volumes were used as model inputs to ensure consistency across the network, particularly where traffic data was collected at different times. Vehicle compositions, desired speed distributions, and driving behavior parameters were applied in accordance with observed conditions and industry best practices.

Appendix A includes a declaration with respect to the Vissim model.

2.6.1 Vissim Model Calibration and Validation

The Vissim model was calibrated in accordance with the MTO Traffic Modeling Guidelines. This methodology compares modeled turning movement counts, travel times, and speeds against observed data.

To ensure traffic volume accuracy and adherence to MTO growth rate requirements, observed traffic volumes were balanced based on anticipated growth at the MTO terminals. Since the MTO terminals exhibited a higher growth rate than the surrounding network, this balancing ensured that:

- ▶ Travel patterns remained consistent throughout the network.
- ▶ Traffic volumes were sufficient to meet the specific growth constraints at the QEW Highway terminals.

Two intersections included in the model are intended only to ensure adequate network loading and to facilitate accurate operations at nearby major intersections. These intersections have no impact on the study assessments and are excluded from calibration, validation, and level of service (LOS) results. They are treated strictly as mid-block locations between the study intersections. These locations are:

- ▶ York Road and Airport Road
- ▶ Taylor Road and the Glendale Outlet Mall driveway entrance

The MTO methodology utilizes the Geoffrey E. Havers (GEH) statistic and the Coefficient of Determination (R²) to validate traffic models, as detailed in the MTO Traffic Simulation Guidelines¹⁰.

Table 2.3 compares observed 2025 turning movement counts to Vissim-generated volumes.

Figure 2.8 illustrates the linear regression analysis. With a GEH statistic less than 5.0 for at least 75% of movements and an R² value exceeding 0.85, the model is considered well-calibrated for traffic volumes.

2.6.2 Intersection and Corridor Operations

Table 2.4 summarizes the intersection operations from the calibrated Vissim model.

Most intersections currently perform adequately, with no intersection exceeding an overall LOS of D and no significant queuing or spillback concerns.

An exception to this is the Glendale Avenue and Eastbound Off-Ramp, where the eastbound left turn movement operates at LOS E during the weekday PM peak hour and LOS F during the Saturday peak hour. Additionally, at the intersection of Glendale Avenue and Taylor Road, the westbound left turn movement operates at LOS E during the Saturday peak hour.

¹⁰ Ministry of Transportation of Ontario Traffic Simulation Protocol, April 2021.

3 Development Concepts

At the time of writing this report, there are currently three active development applications for the development area, including 524 York Road (Phase 2), proposed to be developed by Niagara York Road Inc. A summary of the expected developments includes approximately 2,095 residential units and 6,218 m² of commercial and retail space. The following section provides details of each development:

3.1 253 Taylor Road

3.1.1 Description

253 Taylor Road in the Town of Niagara-on-the-Lake. White Oaks Resort and Spa is a luxury hotel and conference centre. The site is generally located in the northeast quadrant of the Glendale Avenue and Taylor Road intersection.

The White Oaks Resort and Spa is accessed by three private driveway connections to Taylor Road, referred to as the North, Middle, and South. The North and Middle driveways are full-movement unsignalized intersections with stop-control on the private site driveway approaches. The South driveway is a full-movement signalized intersection, and the east leg of the intersection functions as the main access driveway to the White Oaks Resort and Spa with direct access to the hotel drop-off/pick-up area. The west leg of the intersection currently functions as the de facto main site access to the Outlet Collection at Niagara retail shopping complex.

The property owner proposes to intensify the southern half of the property by introducing new residential and commercial uses, while maintaining the existing hotel land use. The existing at-grade parking area along the front of the hotel (that is, across the Taylor Road site frontage) will be revised and reconfigured. A portion of hotel-designated parking spaces is proposed to be accommodated within a new parking garage structure to be constructed at the rear of the property.

The concept plan includes two mixed-use buildings, each containing two towers connected by a podium—810 residential units and 1,516 m² (16,313 sq. ft.) of ground floor commercial.

Phase 1 (Block 2) consists of 390 residential units in 21-storey and 17-storey towers, and Phase 2 (Block 1) consists of 420 residential units in 25-storey and 18-storey towers and the 1,516 m² of ground floor commercial development.

For assessment purposes, the proposed development is anticipated to be constructed in two phases, with the first phase opening in 2027 and full build-out of the site by 2030. It is acknowledged these horizon years are dependent on market conditions and approvals.

Vehicle access to the overall site will be provided via the existing South and North driveways with Taylor Road. Closure of the Middle driveway is proposed with the planned site redevelopment. Access to the proposed residential buildings will be provided by constructing a new internal private roadway.

The private driveway connection at the rear of the site will be secondary in design and function; however, it is still required as a fire route to the rear of the building. This roadway will be constructed immediately, along with the rest of the needed upgrades to the White Oaks facility (parking structure, parking lots, hotel entrance, etc.).

A two-level underground parking structure will serve the proposed residential buildings. In contrast, the existing White Oaks Resort and Spa will be further complemented by constructing a two-level above-grade parking structure.

Figure 3.1 illustrates the site concept plan.

TAYLOR ROAD

NTS

253 Taylor Road Site Concept Plan

3.1.2 Site Trip Generation

Trip generation for the site is based on the *White Oaks Village, 253 Taylor Road Transportation Impact & Parking Study Update* and MTO pre-consultation comments.

The Institute of Transportation Engineers (ITE) Trip Generation¹¹ is referenced to estimate the vehicular site trip generation. Land Use Code (LUC) 222 – Multifamily Housing (High-Rise) and LUC 822 – Strip Retail Plaza (<40k) were used to estimate the vehicle trips generated. Vehicle trips were calculated using an average rate.

No modal split adjustments have been applied to the trip generation estimate to account for active transportation or transit-oriented trips.

Table 3.1 summarizes the estimated trip generation for the development.

Phase 1 is forecast to generate approximately 105, 125, and 147 new vehicle trips during the AM, PM, and Saturday peak hours.

Phase 2 is forecast to generate approximately 151 trips in the AM peak hour, 242 trips in the PM peak hour, and 263 trips in the Saturday peak hour. It is noted that pass-by trips for the commercial land use in PM and Saturday peak hours were obtained from Land Use Code 820 (Shopping Centre) from the ITE *Trip Generation Handbook*¹² as pass-by trips for LUC 822 (Strip Plaza, <40K) are not available. At the request and following the guidance provided by the Region, only a portion of the LUC 820 pass-by rates were used. A 27% pass-by rate has been employed during the PM and Saturday peak hours. The resulting net trip generation is 148 AM peak hour trips, 208 PM peak hour trips, and 232 Saturday peak hour trips.

Upon full build-out, the site is estimated to generate 253 AM peak hour trips, 333 PM peak hour trips, and 376 Saturday peak hour trips.

¹¹ Institute of Transportation Engineers, *Trip Generation Manual*, 11th ed., (Washington DC: ITE, 2021).

¹² Institute of Transportation Engineers, *Trip Generation Handbook*, 3rd ed., (Washington, DC: ITE, 2017).

TABLE 3.1: 253 TAYLOR ROAD – ESTIMATED SITE GENERATED TRAFFIC

Land Use	AM Peak Hour			PM Peak Hour			SAT Peak Hour		
	In	Out	Total	In	Out	Total	In	Out	Total
Phase 1 (2027)									
LUC 222 – 390 Units	27	78	105	77	48	125	84	63	147
Phase 1 Subtotal	27	78	105	77	47	125	84	63	147
Phase 2 (2030)									
LUC 222- 420 Units	29	84	113	83	51	134	89	67	156
LUC 822 – 16.31k sq. ft.	24	14	38	52	56	108	55	52	107
Phase 2 Subtotal	53	98	151	135	107	242	144	119	263
<i>Internal</i>	<i>-1</i>	<i>-2</i>	<i>-3</i>	<i>-3</i>	<i>-2</i>	<i>-5</i>	<i>-1</i>	<i>-1</i>	<i>-2</i>
<i>Pass-by</i>	<i>0</i>	<i>0</i>	<i>0</i>	<i>-15</i>	<i>-15</i>	<i>-29</i>	<i>-15</i>	<i>-14</i>	<i>-29</i>
Phase 2 Net Subtotal	52	96	148	117	90	208	128	104	232
Total	79	144	253	194	137	333	212	167	379

LUC 222: AM – $T = 0.27(X)$ | PM – $T = 0.32(X)$ | SAT – $T = 0.36(X)$

LUC 822: AM – $T = 2.36(X)$ | PM – $T = 6.59(X)$ | SAT – $T = 6.57(X)$

Internal Trip Rate: 2%

LUC 822 Pass by: AM – 0% | PM – 27% | SAT – 27%

The site-generated trips were assigned to the road network based on origin/destination information extracted from the 2016 Transportation Tomorrow Survey and a review of existing traffic patterns at the study intersections. Data was extracted from TAZ 6052. The estimated distribution will be used for the weekday AM, PM, and Saturday peak hours.

Table 3.2 summarizes the estimated trip distribution.

TABLE 3.2: 253 TAYLOR ROAD – ESTIMATED TRIP DISTRIBUTION

Route	Weekday AM and PM, and Saturday	
	To	From
QEW via Toronto	34%	36%
QEW via Niagara Falls	12%	10%
Glendale Avenue via Niagara-on-the-Lake	7%	7%
Glendale Avenue via St. Catharines	22%	21%
Taylor Road Southwards	17%	20%
Taylor Road Northwards	8%	6%
Total	100%	100%

The new site-generated trips have been assigned to the existing White Oak Resort and Spa South driveway, as this provides the most direct access to the proposed land uses.

3.2 524 York Road – Phase 2

3.2.1 Description

524 York Road, located on the northeast corner of Glendale Avenue and York Road in the Town of Niagara-on-the-Lake.

The development proposes 227 hotel rooms and approximately 372 m² of restaurant uses served by a total parking supply of 268 vehicular and 26 bicycle parking spaces. Vehicle access is maintained via two driveway connections to Counsell Street and Glendale Avenue through the existing shared east/west drive aisle bisecting the Phase 1 and 2 lands.

Build-out is anticipated to occur in one phase by 2030, but the timing is subject to market conditions.

Appendix D contains the AutoTURN assessment.

Figure 3.2 illustrates the site concept plan.

NTS

524 York Road – Phase 2 Site Concept Plan

3.2.2 Site Trip Generation

The Institute of Transportation Engineers (ITE) Trip Generation¹³ is referenced to estimate the vehicular site trip generation. LUC 310 – Hotel and LUC 932 – High-Turnover (Sit-Down) Restaurant were used to estimate the vehicle trips generated.

No modal split adjustments have been applied to the trip generation estimate to account for active transportation or transit-oriented trips.

Table 3.3 summarizes the estimated trip generation for the development. The subject site is forecast to generate approximately 144, 176, and 208 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.

TABLE 3.3: 524 YORK ROAD – PHASE 2 – ESTIMATED SITE GENERATED TRAFFIC

Land Use	AM Peak Hour			PM Peak Hour			SAT Peak Hour		
	In	Out	Total	In	Out	Total	In	Out	Total
LUC 310 – 227 Units	59	47	106	71	69	140	91	72	163
LUC 932 – 4.00k sq. ft.	21	17	38	22	14	36	23	22	45
Total	80	64	144	93	83	176	114	94	208

LUC 310: AM – $T = 0.50(X) - 7.45$ | PM – $T = 0.74(X) - 27.89$ | SAT – $T = 0.69(X) + 5.95$
 LUC 932: AM – $T = 9.57(X)$ | PM – $T = 9.05(X)$ | SAT – $T = 11.19(X)$

Table 3.4 summarizes the estimated trip distribution. The distribution is based on a review of existing travel patterns. The patterns capture the typical traffic patterns reflective of existing hotels. The methodology was confirmed during pre-consultation.

3.3 Parcels 6 & 7

3.3.1 Description

Parcel 6 is located at the northwest corner of York Road and Townline Road, and Parcel 7 is located at the southwest corner of York Road and Townline Road.

Parcel 6 proposes 744 residential units, 2650 m² (28,524 sq. ft.) of retail use, and 1680 m² (18,083 sq. ft.) of commercial use. Vehicle access for Parcel 6 is proposed via two driveway connections to Townline Road, approximately 125 m and 240 m north of the intersection with York Road. A total of 800 vehicular parking spaces are provided.

Parcel 7 is proposing 541 residential units. Vehicular access to Parcel 7 is proposed via a single driveway connection to York Road, approximately 105 m west of the intersection with Townline Road. A total of 522 vehicular parking spaces are provided.

Build-out is anticipated in three phases: 2030, 2032, and 2034. Timing is subject to market conditions.

Phase 1 includes 384 high-rise residential units, 690 m² (7,427 sq. ft.) of commercial use, and 1770 m² (19,052 sq. ft.) retail use in Parcel 6.

Phase 2 includes 250 mid-rise residential units and 990 m² (10,656 sq. ft.) commercial use in Parcel 6. Parcel 7 contains 365 high-rise residential units.

Phase 3 includes 110 mid-rise residential units and 880 m² (9,472 sq. ft.) retail use in Parcel 6. Parcel 7 contains 176 mid-rise residential units.

Figure 3.3 illustrates the site concept plan.

3.3.2 Site Trip Generation – Parcel 6

The Institute of Transportation Engineers (ITE) Trip Generation¹⁴ is referenced to estimate the vehicular site trip generation. LUC 221 – Multifamily Housing (Mid-Rise), LUC 222 – Multifamily Housing (High-Rise), LUC 710 – General Office Building, LUC 720 – Medical- Dental Office Building, and LUC 822 Strip Retail Plaza (<40k) were used to estimate the vehicle trips generated.

No modal split adjustments have been applied to the trip generation estimate to account for active transportation or transit-oriented trips.

Table 3.5 summarizes the estimated trip generation for the parcel.

Phase 1 is forecast to generate approximately 170, 273, and 293 new vehicle trips during the AM, PM, and Saturday peak hours.

Phase 2 is forecast to generate approximately 292, 397, and 400 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.

Phase 3 is forecast to generate approximately 65, 118, and 106 new vehicle trips during the AM, PM, and Saturday peak hours.

Upon full build-out, the parcel is forecast to generate approximately 357, 515, and 506 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.

¹⁴ Institute of Transportation Engineers, *Trip Generation Manual*, 11th ed., (Washington DC: ITE, 2021).

3.3.3 Site Trip Generation – Parcel 7

The Institute of Transportation Engineers (ITE) Trip Generation¹⁵ is referenced to estimate the vehicular site trip generation. LUC 221 – Multifamily Housing (Mid-Rise) and LUC 222 – Multifamily Housing (High-Rise) were used to estimate the vehicle trips generated.

No modal split adjustments have been applied to the trip generation estimate to account for active transportation or transit-oriented trips.

Table 3.7 summarizes the estimated trip generation for the parcel.

Phase 2 is forecast to generate approximately 99, 118, and 140 new vehicle trips during the AM, PM, and Saturday peak hours.

Phase 3 is forecast to generate approximately 66, 69, and 71 new vehicle trips during the AM, PM, and Saturday peak hours.

Upon full build-out, the parcel is forecast to generate approximately 165, 187, and 211 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.

¹⁵ Institute of Transportation Engineers, *Trip Generation Manual*, 11th ed., (Washington DC: ITE, 2021).

TABLE 3.7: 524 YORK ROAD – PARCEL 7 – ESTIMATED SITE GENERATED TRAFFIC

4 Future Traffic Conditions

The assessment of future conditions in this section includes the following components:

- ▶ Future background traffic estimates;
- ▶ Operational analysis of background traffic conditions (pre-development);
- ▶ Future total traffic estimates; and
- ▶ Operational analysis of total traffic conditions (post-development).

4.1 Forecast Traffic

A Phase 1 horizon (2027), Phase 2 horizon (2030), Phase 3 horizon (2032), ultimate build-out horizon (2034), five-year post-ultimate build-out horizon (2039), and ten-year post-ultimate build-out horizon (2044) have been assessed. The likely future traffic volumes near the subject site are estimated to consist of:

- ▶ Increased non-site traffic (generalized background traffic growth) and
- ▶ Traffic generated by the subject sites.

During pre-study consultation the review agencies confirmed a simple background growth rate of 2% per annum for all study area volumes except for the MTO Ramps, which are to use a 2.9% growth rate. Volumes were balanced to ensure the continuity of flows throughout the network.

Figure 4.1 to Figure 4.18 illustrate the background traffic volumes.

The total traffic volume consists of background traffic and development site-generated traffic. **Figure 4.19 to Figure 4.36** illustrate the total traffic volumes.

4.2 Local Intersection Operational Analysis

The study area intersection operational analyses followed the same methodology used for existing conditions. No changes to the existing lane configurations or signal timings are assumed.

Table 4.1, **Table 4.2**, and **Table 4.3** summarize the level of service conditions during the background traffic AM, PM, and Saturday peak hours, respectively.

Table 4.4, **Table 4.5**, and **Table 4.6** summarize the level of service conditions during the total traffic AM, PM, and Saturday peak hours, respectively.

Appendix F contains the detailed background traffic Synchro 12 reports.

Appendix G contains the detailed total traffic Synchro 12 reports.

4.2.1 Glendale Avenue and Hilton Garden Inn/Site Driveway

The site driveway to Glendale Avenue is forecast to operate at acceptable levels of service under all horizon years and peak hours. Delays on the driveway approach are forecast to be in the LOS A to LOS B range with v/c ratios of less than 0.20. Queues on the driveway approach are minimal (less than 1 car length) and are not expected to spill back into any internal drive aisle intersections.

Mainline delays at the site driveway are forecasted to occur at acceptable levels of service. Delays on Glendale Avenue are forecast to be in the LOS A range with v/c ratios of less than 0.05.

4.2.2 Counsell Street and Site Driveway/Purolator Driveway

The site driveway to Counsell Street is forecast to operate at acceptable levels of service under all horizon years and peak hours. Delays on the driveway approach are forecast to be in the LOS A range with v/c ratios of less than 0.05. Queues on the driveway approach are minimal (less than 1 car length) and are not expected to spill back into any internal drive aisle intersections.

Mainline delays at the site driveway are forecasted to occur at acceptable levels of service. Delays on Counsell Street are forecast to be in the LOS A range with v/c ratios of less than 0.05.

4.2.3 York Road and Counsell Street

The intersection operates at acceptable levels of service for most conditions. The exception is the 2034, 2039, and 2044 total traffic conditions during the PM peak hour. The southbound movement is forecast to operate in the LOS D to LOS F range with delays of up to 47 seconds.

4.2.4 York Road and Townline Road

The critical northbound movement during the base year PM peak hour is forecast to be exacerbated by the increase in traffic. This movement becomes critical under the 2030 background and total traffic conditions during the AM peak hour and becomes critical during the 2034 background and 2030 total traffic conditions during the Saturday peak hour. This movement operates in the LOS D to LOS F range with critical delays exceeding 300 seconds.

The southbound movement becomes critical under 2039 background traffic and 2030 total traffic conditions during the PM peak hour and under 2032 total traffic conditions during the AM and Saturday peak hours. This movement operates in the LOS D to LOS F range with critical delays exceeding 300 seconds. Queues are forecast to block the proposed site driveways.

4.2.5 Townline Road and North Site Driveway

The north site driveway to Townline Road is forecast to operate at acceptable levels of service under all horizon years and peak hours. Delays on the driveway approach are forecast to be in the LOS A to LOS B range with v/c ratios of less than 0.20. Queues on the driveway approach are minimal (less than 1 car length) and are not expected to spill back into any internal drive aisle intersections.

Mainline delays at the site driveway are forecasted to occur at acceptable levels of service. Delays on Townline Road are forecast to be in the LOS A range with v/c ratios of less than 0.20.

4.2.6 Townline Road and South Site Driveway

The south site driveway to Townline Road is forecast to operate at acceptable levels of service under all horizon years and peak hours. Delays on the driveway approach are forecast to be in the LOS A to LOS B range with v/c ratios of less than 0.25. Queues on the driveway approach are minimal (less than 1 car length) and are not expected to spill back into any internal drive aisle intersections.

Mainline delays at the site driveway are forecasted to occur at acceptable levels of service. Delays on Townline Road are forecast to be in the LOS A range with v/c ratios of less than 0.25.

4.2.7 York Road & Site Driveway

The site driveway to York Road is forecast to operate at unacceptable levels of service under all horizon years and peak hours. Delays on the driveway approach are forecast to be in the LOS E to LOS F range with a maximum v/c ratio of 1.71. Queues on the driveway approach are up to 62 metres and may spill back into the internal drive aisle intersections.

Mainline delays at the site driveway are forecasted to occur at acceptable levels of service. Delays on York Road are forecast to be in the LOS A range with v/c ratios of less than 0.75.

4.3 Glendale Avenue Corridor Operational Analysis

The future scenarios were assessed for travel times, speeds, and intersection operations.

Table 4.7 through **Table 4.12** summarizes the background traffic intersection operational results.

Table 4.13 through **Table 4.18** summarize the total traffic intersection operational results.

4.3.1 York Road and Glendale Avenue

Under existing and 2033 Total horizon conditions, the roundabout operates efficiently in both the AM and PM peak hours, with low entry delays and generally balanced approach performance. In the longer-term horizons, increasing circulating volumes reduce available entry gaps, resulting in disproportionate increases in entry delay on the westbound approach. This trend is observed across all peak hours, with the westbound approach becoming increasingly sensitive to relatively small increases in demand.

Overall, the roundabout continues to operate at acceptable levels of service for most movements. The primary exception is the westbound approach, which is projected to operate at LOS F under 2039 Background traffic conditions during the AM peak hour. Under Total Traffic conditions, the westbound approach is also forecast to operate at LOS F during the PM peak hour in 2030, with the northbound right-turn movement operating at LOS F in the 2039 horizon. In the ultimate horizon, the westbound approach is projected to experience delays of up to approximately 111 seconds under the 2044 Total Traffic scenario.

4.3.2 Glendale Avenue and QEW Westbound Off-Ramp (North Ramp)

Operations at this ramp terminal progressively deteriorate across the analyzed horizon years, with delays increasing in all peak hours as competing ramp and arterial traffic volumes intensify. The QEW westbound off-ramp is forecast to operate at LOS F during the weekday PM peak hour under the 2027 Background scenario and during the Saturday peak hour under the 2024 Background scenario. In the ultimate horizon, the weekday AM peak hour is also projected to operate at LOS F under 2044 Total Traffic conditions. Under this scenario, westbound movement delays are forecast to reach up to approximately 194 seconds.

4.3.3 Glendale Avenue and QEW Eastbound Off-Ramp (South Ramp)

Operations at this ramp terminal progressively deteriorate across the analyzed horizon years, with delays increasing in all peak hours as competing ramp and arterial traffic volumes intensify. The QEW eastbound off-ramp is forecast to operate at LOS F during both the weekday PM and Saturday peak hours under the 2027 Background scenario, and during the weekday AM peak hour under the 2032 Total Traffic scenario. In the ultimate horizon, eastbound movement delays are projected to reach up to approximately 440 seconds under the 2044 Total Traffic conditions.

4.3.4 Glendale Avenue and Lampman Court

This intersection experiences relatively minor operational changes between the existing and near-term horizons. As longer-term growth is applied, Saturday peak delays increase incrementally. Despite these increases, the intersection continues to operate satisfactorily, with no operational failures identified.

4.3.5 Glendale Avenue and Taylor Road

Results indicate that this intersection operates acceptably under existing and near-term horizons, with only modest increases in delay as traffic volumes grow. The Saturday peak hour shows greater sensitivity to horizon year growth, particularly for the eastbound left-turn movement, which is projected to operate at LOS F under the 2030 Background scenario. Later horizon years indicate increased congestion and delay for this movement, particularly under the 2039 Total scenario, which sees the movement continue to operate with high delays during the Saturday and Weekday PM peak hours.

The westbound left-turn movement is forecast to experience delays of up to 154 seconds under the 2044 Total Traffic scenario.

5 Remedial Measures

5.1 Traffic Signal Control

The need for traffic control improvements is assessed using the Ontario Traffic Manual (OTM Book 12) signal warrant¹⁶ procedures. To warrant the consideration for the installation of traffic signal control with forecast traffic volumes (average hourly volumes), at least one warrant must be fulfilled by 120% for an existing intersection or 150% for a proposed new intersection.

Table 5.1 summarizes the OTM signal warrants for the unsignalized study area intersections with significant volumes. Based on the volume warrant analysis, signals are not warranted at any of the study area intersections.

Appendix H contains the warrant analysis.

TABLE 5.1: OTM WARRANT SUMMARY

Intersection	Horizon	OTM Warrant				Warranted
		1A	1B	2A	2B	
York Road & Counsell Street	Total (2044)	144%	22%	139%	7%	No
York Road & Townline Road	Total (2044)	131%	111%	105%	31%	No
York Road & Site Driveway	Total (2044)	135%	19%	128%	53%	No

¹⁶ Ontario Ministry of Transportation, *Ontario Traffic Manual Book 12: Traffic Signals*, (Toronto: Queen's Printer for Ontario, 2012).

5.2 Auxiliary Turn Lanes

The Ministry of Transportation's (MTO) *Design Supplement 2023 for the TAC Geometric Design Guide for Canadian Roads 2017*¹⁷ provides guidance on the assessment and/or need for auxiliary left-turn lanes. The warrant nomograph to determine if a left-turn lane is needed is based on the following criteria:

- ▶ Design speed of the road (posted speed + 20 km/h);
- ▶ Advancing volume;
- ▶ Opposing volume; and
- ▶ Percent of advancing vehicles performing a left-turn maneuver.

The movements were analyzed using the nomographs for left-turn lanes on two-lane undivided highways at unsignalized intersections. **Appendix I** contains the MTO left-turn lane warrants nomographs for the study area intersections.

Table 5.2 and **Table 5.3** summarize the warrant analysis. The warrant analysis indicates:

- ▶ An eastbound left-turn lane is warranted under base year conditions on York Road at Townline Road. A left-turn lane is recommended if the preferred remedial measure of a roundabout is not implemented at this intersection.
- ▶ A westbound left-turn lane on York Road at the site driveway is not warranted. Turning volumes are forecast to be less than 5% of the total advancing volume.
- ▶ A northbound left-turn lane is warranted on Townline Road at the south site driveway under 2032 total traffic conditions and
- ▶ A northbound left-turn lane is warranted on Townline Road at the north site driveway under 2039 total traffic conditions.

The northbound left-turn lanes are recommended to provide a minimum of 25 metres of storage for the intersection with the south site driveway and 15 metres of storage for the intersection with the north site driveway to accommodate the forecast future traffic volumes based upon reported operations. Based on the proximity of the driveways and existing driveways on the east side of the road, a two-way left-turn lane is recommended. **Appendix K** contains the functional drawings.

5.3 Local Intersection Improvements

The study area intersection operational analyses followed the same methodology used for existing conditions.

Figure 5.1 - 5.3 Illustrate the remedial total traffic volumes.

Tables 5.4 – 5.6 summarize the level of service conditions with remedial measures during the AM, PM, and Saturday peak hours, respectively. **Appendix L** contains the detailed remedial total traffic Synchro 12 reports.

5.3.1 York Road and Counsell Street

Restricting the southbound movement to right-out only in 2034 could be considered to reduce delays. Left-turning traffic can navigate to Glendale Avenue and utilize the York Road and Glendale Avenue roundabout to travel east.

With this condition in place, the critical movement is resolved under all peak hours. The southbound movement operates in the LOS B range with up to 15-second delays.

Based on observed traffic volumes, the southbound left-turn movement currently accounts for approximately 4 to 8 vehicles during peak hours, indicating a relatively low number of affected vehicles. The existing roundabout at York Road and Glendale Road is located approximately 200 metres west of the Counsell Street intersection, providing a convenient turnaround for vehicles exiting the Purolator site to travel east along York Road. As such, the required detour distance is not considered significant in maintaining reasonable site accessibility.

Nevertheless, we recognize that the proposed restriction may result in minor changes to Purolator vehicle traffic. As a result, it is recommended that the intersection operate in its current form for the interim, until Counsell Street is extended further north, as envisioned in the Glendale Secondary Plan. At that time, the restriction could be implemented, as an alternative route for Purolator vehicles to travel east will be available.

5.3.2 York Road and Townline Road

The Niagara Region Roundabout Screening Form was used to determine the feasibility of implementing a roundabout to reduce delays and mitigate queuing issues. The intersection meets the property impacts, precluding factors, and suitability factors thresholds. The intersection is also identified as a Character Gateway within the *Glendale Area Secondary Plan*. Based on this, the location could

proceed to an Intersection Control Study. **Appendix M** contains the roundabout screening form. **Appendix J** contains the functional design.

It is recommended that the roundabout be constructed by 2030 to address the critical movements noted at the intersection.

5.3.3 York Road & Site Driveway

Restricting the site driveway to right-in/right-out is recommended to alleviate the critical movements. Under this condition, the northbound movement operates at LOS D during the PM peak hour with a maximum delay of 27 seconds. Queueing into the internal drive aisle intersection is also resolved with this restriction.

Mainline delays at the site driveway are forecast to remain at acceptable levels of service.

5.4 Glendale Corridor Improvements

Table 5.7. Summarize the level of service conditions with remedial measures completed for the Glendale Avenue corridor during the AM, PM, and Saturday peak hours, respectively.

5.4.1 York Road and Glendale Avenue

Adding a two-lane east leg to the existing roundabout under 2030 conditions should be considered to improve traffic operations. This improvement allows westbound movement to operate more reliably across all conditions. However, the analysis identifies there is projected to still be delays in the LOS F range for the weekday PM and Saturday peak hours.

5.4.2 Glendale Avenue (Southbound) and QEW Westbound Off-Ramp

Implementing an additional westbound left-turning lane and converting traffic control to the westbound lane is recommended under 2027 Background conditions. With this improvement, the movement operates at acceptable levels under all conditions.

5.4.3 Glendale Avenue (Northbound) and QEW Eastbound Off-Ramp

Implementing an additional eastbound left-turning lane and converting traffic control to the eastbound lane is recommended under base year conditions. With this improvement, the movement operates at acceptable levels under all conditions.

6 524 York Road Impacts

The Ministry of Transportation Ontario has released a guideline called "A Guideline for Highway Improvements Associated with Development"¹⁸ to clarify who is responsible for making roadway improvements when land use development requires it. This guide outlines the steps municipalities and stakeholders must follow when constructing improvements to a roadway, whether directly or indirectly. Although this guide is primarily intended for roads under Provincial jurisdiction, it provides valuable insight into the responsibilities involved in these projects.

6.1 Primary Impacts

Section 3A of the guideline outlines the following:

"Where a proposed Development will gain access to a provincial highway either directly by private entrance or by a new municipal road, the Proponent is responsible (financially or otherwise) for all warranted Highway Improvements, identified in the approved Traffic Impact Study. The Proponent is also responsible for any Highway Improvements that are not required immediately but that have been identified as being warranted in the future as a result of the Development. Any such future Highway Improvements are the responsibility (financially or otherwise) of the Proponent and must be addressed to MTO's satisfaction before MTO permits will be issued."

Based on the above, the Applicant will be responsible for the costs related to restricting Counsell Street at York Road to right out only should the Region and Town agree to move ahead with this recommendation. This would likely entail extending the existing median along York Road and creating a delta island for the north leg along Counsell Street to restrict southbound vehicles from performing a left movement.

¹⁸ A Guideline for Highway Improvements Associated with Development, MTO, May 2005.

6.2 Secondary Impacts

Section 3C of the guideline outlines the following:

"Based upon MTO's review of a Proponent's Traffic Impact Study, it identifies a warrant for Highway Improvements based on existing and/or projected background traffic volumes. The Proponent would be responsible (financially or otherwise) for any additional Highway Improvements required over and above the existing and/or projected background traffic volumes, in order to accommodate the proposed Development traffic."

The Guideline is clear: the applicant shall only be responsible for the Highway Improvements over and above the existing and/or projected background traffic volumes.

The analysis provided herein has also determined that several improvements are required at the study area intersections because of cumulative background developments. As the study area roadways are projected to have significant growth unrelated to the proposed development, it is difficult to identify what specific improvements the development would trigger (if any) at these congested intersections.

As the Applicant is looking to develop in the relatively short term, the uncertainty of site-specific developments proposed for the area provides uncertainty, given that the various proposals could not materialize as envisioned or ever. As a result, an additional scenario has been reviewed that isolates the direct impacts of the build-out of 524 York Road (Phase 2) solely and consists of traffic estimates comprised of base year traffic grown to year 2044 through the use of the background growth rate plus development traffic.

Appendix M contains the isolated projections and detailed reports.

Based on a review of the isolated projections, the operations with and without the build-out of 524 York Road (Phase 2) are similar, as no new critical movements are identified and does not trigger the need for any improvements to the study area intersections.

7 Conclusions and Recommendations

7.1 Conclusions

The main findings and conclusions of this study are as follows:

- ▶ **Existing Traffic Operations:** During the AM and PM peak hours at York Road and Townline Road intersections, the northbound movement is expected to operate in the LOS D to LOS E range. In the Saturday peak hour, the westbound QEW Off-Ramp and eastbound QEW Off-Ramp movements operate with high delays.
- ▶ **253 Taylor Road Site Generated Traffic:** Phase 1 is forecast to generate approximately 105, 125, and 147 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Upon full build-out, the site is estimated to generate 253 AM peak hour trips, 333 PM peak hour trips, and 379 Saturday peak hour trips.
- ▶ **524 York Road – Phase 2 Site Generated Traffic:** The subject site is forecast to generate approximately 144, 176, and 208 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.
- ▶ **524 York Road – Parcel 6 Site Generated Traffic:** Phase 1 is forecast to generate approximately 170, 273, and 293 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Phase 2 is forecast to generate approximately 292, 397, and 400 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Phase 3 is forecast to generate approximately 65, 118, and 106 new vehicle trips during the AM, PM, and Saturday peak hours. Upon full build-out, the parcel is forecast to generate approximately 357, 515, and 506 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.
- ▶ **524 York Road – Parcel 7 Site Generated Traffic:** Phase 2 is forecast to generate approximately 99, 118, and 140 new vehicle trips during the AM, PM, and Saturday peak hours, respectively. Phase 3 is forecast to generate approximately 66, 69, and 71 new vehicle trips during the AM, PM, and Saturday peak hours. Upon full build-out, the parcel is forecast to generate approximately 165, 187, and 211 new vehicle trips during the AM, PM, and Saturday peak hours, respectively.
- ▶ **Background Traffic Operations:** Accounting for background growth, the critical movements identified in the existing traffic horizon are forecast to further degrade with the anticipated

increase in non-site related traffic. Additional new critical movements are noted at the York Road and Glendale Avenue, York Road and Townline Road, Glendale Avenue and QEW Westbound Off-Ramp and Glendale Avenue and QEW Eastbound Off-Ramp.

- ▶ **Total Traffic Operations:** With site-generated traffic, additional critical movements are noted at the York Road, Counsell Street Townline Road and South Site Driveway intersections.
- ▶ **Traffic Signal Control:** Traffic signals are not warranted at any study area intersection.
- ▶ **Auxiliary Turn Lanes:** Left turn lanes are warranted at the south site driveway and north site driveway on Townline Road under 2032 and 2039 conditions, respectively. The northbound left-turn lanes are recommended to provide a minimum of 25 metres for the intersection with the south site driveway and 15 metres for the intersection with the north site driveway to accommodate the forecast future traffic volumes based upon reported operations. Implementing a two-way left-turn lane would satisfy both storage requirements. An eastbound left turn lane is warranted under base year conditions on York Road at Townline Road. A left-turn lane is recommended if the preferred remedial measure of a roundabout is not implemented at this intersection.
- ▶ **Intersection Improvements:** The following intersection improvements are identified to remediate the noted critical movements:
 - **York Road and Glendale Avenue:** Add a two-lane east leg to the existing roundabout under 2030 conditions.
 - **York Road and Counsell Street:** Restrict the southbound movement to right out only once Counsell Street is extended northerly.
 - **York Road and Townline Road:** Convert the stop-controlled intersection to a roundabout under 2030 conditions.
 - **Glendale Avenue (Southbound) and QEW Westbound Off-Ramp:** Implementing an additional westbound turning lane and converting the stop-controlled off-ramp to signal control is recommended under 2027 conditions.
 - **Glendale Avenue (Northbound) and QEW Eastbound Off-Ramp:** Implementing an additional eastbound turning lane and converting the stop-controlled off-ramp to signal control is recommended under base-year conditions.

- **York Road & Site Driveway:** Restrict the northbound site driveway to right-in/right-out.

7.2 Recommendations

- ▶ The Town of Niagara-on-the-Lake implement the active transportation and transit facilities identified within the *Glendale Secondary Plan*;
- ▶ Changes in real-world traffic volumes should be monitored, and
- ▶ The noted intersection improvements should be implemented to facilitate the developments.

Good Day Adam:

Re: **1) Provision of MTO Comments on Draft ToR (MD-TIS)**
2) Address Paradigm's Question on the traffic data for the 253 Taylor Road study

Application Address: **524 York Road (Parcels 5, 6, & 7) and 253 Taylor Road, Niagara-On-The-Lake, ON (QEW)**

Proposed:

- 1. Parcel 5 (10-Storey Hotel & Restaurants)**
- 2. Parcel 6 (2 8-Storey & 1 Storey Bldgs)
Parcel 7 (1 8-Storey & 1 23-Storey Bldgs)**
- 3. 253 Taylor Road (Mixed-Use development with 4 Towers ranging from 18-25 storeys with 810 units)**

Given the complexity and proximity of the interchange to the roundabout, the traffic analysis must be done in microsimulation. Comments in red below on their TOR and other comments in the email provided on October 27, 2025 3:41 PM.

Our Traffic Office reviewed the draft ToR and provides the following comments:

1. MTO require the submission of a full TIS (following MTO TIS guidelines and by a RAQS qualified consultant) to assess the future impact of the proposed development to identify if there are any warranted highway/road improvements. Given the complexity and proximity of the interchange to the roundabout, the traffic analysis must be done in microsimulation. Both editable/printable and locked version of the MDTIS is required. Digital micro-simulation files are required at time of submission.
2. The consultant is responsible for thoroughly reading and adhering to the MTO TIS guidelines. If any reasonable requirements are missed, it is the consultant's obligation to provide them. The absence of a specific instruction in the TOR does not negate the necessity of fulfilling the reasonable requirement.
3. Any data collected for the MDTIS must be by a RAQS qualified company/consultant. It is the responsibility of the RAQS qualified consultant to ensure the proper data is used (ex. season or non MTO) and seasonal factors applied as appropriate. Winter counts are not accepted. It is the consultants responsibility to update and use proper data. Niagara Region data must be collected June 15 to Sept 1 to achieve peak volumes, recent MTO data is attached.
4. Any functional designs provided in the TIS, are not accepted or approved until P&D/TIMD review once the TIS is approved.
5. A summary of the key findings on the transportation impact of the proposed development on the highway corridor shall be presented, along with a summary of the recommended improvements. Any

improvements identified in the TIS as warranted within the first five years of the development's operation shall be constructed prior to opening day. Please note that 'monitoring' is not an acceptable recommendation.

6. Use simple growth rate for volume projections.
7. Use a 2.9% growth rate at the MTO ramps.
8. Project Delivery (MTO) must comment on any future improvements or construction in the area, which may include hwy widening.
9. Using VISSIM or AIMSUN micro simulation software package, conduct calibration and validation analysis on existing conditions on the road segments within the study limit. Undertake Level of Service calculations using the calibrated model, and assess existing road segments and intersection operations under the existing conditions.
10. Undertake a micro-simulation analysis for the future horizon conditions. Traffic shall be modelled for, the a.m. and p.m. peak weekday & weekend periods (3 hours/period). The model should provide a reliable estimate of the entire study area operation.
11. The projected LOS deficiencies shall be identified, indicating the time period for such deficiencies within the project limits including ramps, ramp terminals and intersections or roundabouts.
12. The MTO simulation protocol shall be followed in undertaking the micro-simulation analysis.
13. As part of the MDTIS if a LTL warrant analysis is required, if the value of the left turning volume % falls between two charts, the designer should check storage lengths produced using the two warrant charts that it falls between and then select the more conservative value after considering other project-specific factors (for example, if the LTL volume % is 16%, the designer should be using both the 15% and 20% warrant charts and then select the most conservative storage length of the two. Similarly, for a 28% left turning volume %, the 25% and 30% warrant charts should be looked at and the conservative storage length should be selected). If the left turning volume % is less than 5%, the 5% warrant chart must be used. In a constrained environment (other than cost) where the installation of conservative left turn storage length creates challenges, the designer should review the pros and cons of all elements and document such. If the intersection is being newly proposed, the designer should compare the safety of other similar (traffic volume and geometry) intersections in the corridor or vicinity with the proposed intersection.
14. If local data is available, or an alternative methodology for trip generation is proposed, including the use of proxy sites (we would require the average of 3 proxy sites), the use of this data or methodology shall be discussed and approved by MTO in advance of the preparation of the TIS. For trip generators considered by MTO as unique or not adequately estimated by ITE trip generation parameters, an alternative methodology for trip generation shall be discussed and approved by MTO prior to starting the TIS.
15. All intersection capacity analysis on impacted intersections or interchanges within MTO facilities must follow MTO/TAC protocols. When evaluating impacts at intersections please refer to the TAC's Geometric Design Guide for Canadian Roads, MTO Design Supplement for TAC's Geometric Design Guide for Canadian Roads (http://www.mto.gov.on.ca/phmpmbp/Reference%20Materials/HwyDes-MTO_DS_TAC_GDG-April2020-Final.pdf) and the OTM Books.)
16. Use the guiding principles included in the ITE's Trip Generation Handbook for the selection between rates and equations.
17. The need for geometric improvements shall be reviewed at all locations in the study area and for each proposed development stage. The TIS shall clearly identify transportation impacts by movement, the transportation system improvements that are needed to mitigate these impacts, and the timing of any recommended improvements. A schematic representation of all geometric improvements shall be included as part of the TIS, identifying lane arrangements and intersection improvements for each horizon year.
18. The need for traffic signals and/or underground traffic signal utility provisions shall be reviewed at all locations affected by the proposed development and for each proposed development stage. Determination of whether traffic signals or provisions for signals are warranted shall be made according to the process described in OTM Book 12. Eight (8) hours of data as a minimum are required to assess signal warrants for existing and background conditions. We do not typically use Average Hour Volume.
19. Queue and storage lengths for left turn and through movements for signalized intersections under MTO jurisdiction need to be calculated using the arrival rate method explained on MTO's Signal Timing

Policy. For queues/storage lengths for right turn movements please refer to Chapter 9 of TAC's Geometric Design Guide for Canadian Roads. Queue assessment shall include a review to determine if the thru queues impede access to auxiliary lanes or if they reach the adjacent intersection. For LT and thru, must convert trucks to passenger vehicles, use factor of 2.0. Provide the results in tabular form. For thru and left turn queues include: peak period, movement, volume, cycle length, %trucks, pcph, m value, number of vehicles and total length. For right turn storage length include: peak period, volume, cycle length, design speed, total length.

20. Signal timing optimization can improve operations however, the resulting settings should still be consistent with our Signal Timing Policy. For example: the timing settings cannot be adjusted to favour the sideroad over the highway.

In addition to the above, MTO provides the comments for the ToR in red:

- **524 York Road, Phase 2**, located on the northeast corner of Glendale Avenue and York Road. The development is proposing approximately 207 hotel rooms and 556 m² of restaurant use. Vehicle access is proposed via two driveway connections to Counsell Street and Glendale Avenue through a shared east/west drive aisle bisecting the Phase 1 and Phase 2 lands. Buildout is anticipated in one phase, 2030; timing is subject to market conditions.
- **524 York Road, Parcel 6 and Parcel 7**. Parcel 6 is located at the northwest corner of York Road and Townline Road and Parcel 7 is located at the southwest corner of York Road and Townline Road. Parcel 6 is proposing 744 residential units and 4,330 m² of retail/commercial uses and Parcel 7 is proposing 541 residential units, for a total of 1,285 residential units. Vehicle access for Parcel 6 is proposed via two driveway connections to Townline Road, and vehicle access to Parcel 7 is proposed via a single driveway connection to York Road. Buildout is anticipated in three phases: 2030, 2032, and 2034; timing is subject to market conditions.
- **253 Taylor Road**, generally located in the northeast quadrant of the Glendale Avenue and Taylor Road intersection. The concept plan includes two mixed-use buildings with 810 residential units and 1,516 m² (16,313 sq. ft.) of ground floor commercial. Vehicle access to the overall site is proposed via the existing south and north driveways to Taylor Road. Buildout is anticipated in two phases: 2037, and 2030; timing is subject to market conditions.

We'd like to prepare our report based on the following scope, subject to your comments:

PROPOSED TERMS OF REFERENCE

Study Area Intersections:

- Glendale Avenue at York Road (roundabout);
- York Road at Counsell Street (unsignalized);
- Glendale Avenue at Hotel Driveway (unsignalized);
- Counsell Street at Hotel Driveway (unsignalized);
- QEW at Glendale Avenue North Ramp (signalized); and
- QEW at Glendale Avenue South Ramp (signalized).
- **Glendale at Lampman Crt**
- **Glendale at Taylor Rd**

Analysis Periods:

- Weekday AM peak hour;
- Weekday PM peak hour; and
- Saturday peak hour.

Existing Data:

- TMCs at intersections under MTO jurisdiction collected by Paradigm in January and February 2024; and
- TMCs at intersections under Town or Region jurisdiction collected by Pyramid Traffic Inc. in November 2024.
- **Niagara Region data must be collected June 15 to Sept 1 to achieve peak volumes, recent MTO data is attached.**

Horizon Year: Typically MTO requires three analysis years for the TIS - the opening date of the development, five years, and 10 years from the opening date. Where applicable, each major phase in a multi-phased development shall be assessed separately for the five and 10-year horizons beyond full build-out of the site. Please include the opening date of the developments – it appears to be 2034, please confirm.

Existing conditions;

- 2027 (interim phasing);
- 2030 (interim phasing);
- 2032 (interim phasing);
- 2034 (interim phasing);
- 2039 (five years post full build-out); and
- 2044 (ten years post full build-out).

Capacity Analysis:

- Synchro 12, HCM 2000. **Microsimulation is required using VISSIM or Aimsun**

Background Traffic:

- Background traffic annual growth rate of 2% as confirmed by the Region's forecasting EMME model. **Please use 2.9% for MTO ramps**

Trip Generation:

- ITE Trip Generation Data 11th Edition estimates for the AM, PM, and Saturday peak hours with no modal split reductions.
- Trip generation for **253 Taylor Road** is consistent with *White Oaks Village, 253 Taylor Road Transportation Impact & Parking Study Update* completed by Paradigm in February 2024. **This TIS was not finalized or approved to date, last comments dated June 2024.**

Usama Ali's Notes.

Comments was not sent to NOTL in 2024. My sincere apologies. I received 2 separate comments on M Fri 2024-05-10 and 2024-06-24, for whatever reason, these comments was not combined.

1st Traffic Comments on Fri 2024-05-10

Our review of the updated Transportation Impact and Parking Study report has detected a few discrepancies in the synchro analysis reports as follows:

1. Table 2.2C Base Year Operations (Sat peak hour): The storage lengths identified in the table need to be corrected. For instance, the WBL and WBR storages are more extended than 40m and 60m, as shown in the table and Synchro reports. Review

and amend, as necessary, the available storage for all auxiliary lanes at both ramp terminals.

2. (p.274) Glendale NB & E-N ramp: The EBL move needs to be corrected by relabelling as WBR.
3. (p.275) Glendale SB & W-S ramp: The W-S is a free-flow ramp that transitions into lane 3 on Glendale Ave and continues southbound up to Taylor Rd. Therefore, it does not call for analysis.
4. (p.276) Glendale SB & Glendale NB & QEW WB off-ramp: Per the splits/phases diagram, Phase 2 and Phase 6 are grouped within the same phase pair. Please note they are conflicting moves and cannot be served during one phase. Here, the signal control should be a two-phase operation; the controller simply alternates between northbound and southbound greens, while Ph 8 can operate concurrently with Ph 6.
5. (p.290) Glendale SB Glendale NB & QEW WB off-ramp - The cardinal direction NWR does not match the rest of the movements and should be replaced with a more identical/matching term, i.e., WBR.
6. (p.288/319) The Glendale NB & E-N off-ramp is mistakenly analyzed as an unsignalized intersection, whereas it is, in fact, a signalized one.
7. Based on Google Maps info, I believe the DDI comprises the following four intersections that need to be analyzed:

Intersection Traffic Control

- a. Glendale SB & Glendale NB & QEW E_N ramp Signals
- b. Glendale SB & QEW E-S ramp Stop Control
- c. Glendale NB & Glendale SB south intersection Signals
- d. Glendale NB & QEW W-N ramp Stop Control

Please share if you have any maps displaying IC configurations that are different from Google Maps.

Please rectify the above errors and reviewing and updating the entire analysis is crucial for the report to be accurate.

2nd Traffic Comment on Mon 2024-06-24,

1. Upon careful examination of Table 3.1A, I have noted several inconsistencies between the grand totals and the calculations, which are crucial for accuracy of the report. Some discrepancies, particularly for the Saturday peak hour being the highlighted trip generator, are highlighted in the attached copy of the Table. The Table along with the associated tables and analysis shall be revised accordingly.
2. The lane configurations identified for most ramp terminal intersections in the Synchro analysis must be corrected. Specifically, I need assistance studying the Glendale SB and QEW WBLT intersection, labelled 16 on the synchro map. Still, the synchro report identifies it as Glendale SB & W-S Ramp instead of E-S (east to south) ramp. I request a thorough re-examination all other intersections and update them, as necessary.
3. After reviewing Table 2.2C, it is noticed that during Saturday peak hours (base year), the WBLT move is failing with service level 'F' and continues to fail for all future horizon years. I was just wondering when Glendale NB gets green for 40 seconds in each cycle and Glendale SB has a red. During this interval, there should be practically no traffic on the Glendale SB section downstream of the

signalized intersection. The 40-second gap is sufficient for the WBL turning traffic to clear off the ramp efficiently.

4. The report indicates that Paradigm undertook traffic data collection for the study. However, we have been informed that Paradigm is no longer RAQS-qualified for data collection. We have a serious concern with this issue that needs to be addressed.

Site Traffic Distribution: **see MTO TIS guidelines, trip distribution/assignment page 16**

- **524 York Road Phase 2, Parcel 6, and Parcel 7**, existing Traffic Patterns.
- **253 Taylor Road**, 2016 Transportation Tomorrow Survey zone 6052 and existing traffic patterns (consistent with *White Oaks Village, 253 Taylor Road Transportation Impact & Parking Study Update* completed by Paradigm in February 2024).

Remedial Measures: **see other comments**

- Left-turn lane warrants;
- Intersection improvements; and
- Signal warrants.

Access and Circulation Review:

- AutoTURN assessment.

Report: **see other comments**

- Report documenting the study methodologies, findings, conclusions, and recommendations.

Hi Usama,

Just following up on the MTO comments for the ToR and Traffic Data. We had understood feedback would be available by the end of last week, but nothing has come through yet.

Given our timelines, it would be helpful to get an update on when the comments can be expected. Please let me know if there's any way we can assist in moving this along.

Thanks,

Subject: (240479) 524 York Road – MD-TIS

Greetings,

Paradigm has been retained to conduct a Multi-Development Transportation Impact Study (MD-TIS) for three developments located in the Town of Niagara-on-the-Lake.

The MD-TIS includes:

- **524 York Road, Phase 2**, located on the northeast corner of Glendale Avenue and York Road. The development is proposing approximately 207 hotel rooms and 556 m² of restaurant use. Vehicle access is proposed via two driveway connections to Counsell Street and Glendale Avenue through a shared east/west drive aisle bisecting the Phase 1 and Phase 2 lands. Buildout is anticipated in one phase, 2030; timing is subject to market conditions.
- **524 York Road, Parcel 6 and Parcel 7**. Parcel 6 is located at the northwest corner of York Road and Townline Road and Parcel 7 is located at the southwest corner of York Road and Townline Road. Parcel 6 is proposing 744 residential units and 4,330 m² of retail/commercial uses and Parcel 7 is proposing 541 residential units, for a total of 1,285 residential units. Vehicle access for Parcel 6 is proposed via two driveway connections to Townline Road, and vehicle access to Parcel 7 is proposed via a single driveway connection to York Road. Buildout is anticipated in three phases: 2030, 2032, and 2034; timing is subject to market conditions.
- **253 Taylor Road**, generally located in the northeast quadrant of the Glendale Avenue and Taylor Road intersection. The concept plan includes two mixed-use buildings with 810 residential units and 1,516 m² (16,313 sq. ft.) of ground floor commercial. Vehicle access to the overall site is proposed via the existing south and north driveways to Taylor Road. Buildout is anticipated in two phases: 2037, and 2030; timing is subject to market conditions.

We'd like to prepare our report based on the following scope, subject to your comments:

PROPOSED TERMS OF REFERENCE

Study Area Intersections:

- Glendale Avenue at York Road (roundabout);
- York Road at Counsell Street (unsignalized);
- Glendale Avenue at Hotel Driveway (unsignalized);
- Counsell Street at Hotel Driveway (unsignalized);

- QEW at Glendale Avenue North Ramp (signalized); and
- QEW at Glendale Avenue South Ramp (signalized).

Analysis Periods:

- Weekday AM peak hour;
- Weekday PM peak hour; and
- Saturday peak hour.

Existing Data:

- TMCs at intersections under MTO jurisdiction collected by Paradigm in January and February 2024; and
- TMCs at intersections under Town or Region jurisdiction collected by Pyramid Traffic Inc. in November 2024.

Horizon Year:

- Existing conditions;
- 2027 (interim phasing);
- 2030 (interim phasing);
- 2032 (interim phasing);
- 2034 (interim phasing);
- 2039 (five years post full build-out); and
- 2044 (ten years post full build-out).

Capacity Analysis:

- Synchro 12, HCM 2000.

Background Traffic:

- Background traffic annual growth rate of 2% as confirmed by the Region's forecasting EMME model.

Trip Generation:

- ITE Trip Generation Data 11th Edition estimates for the AM, PM, and Saturday peak hours with no modal split reductions.
- Trip generation for **253 Taylor Road** is consistent with *White Oaks Village, 253 Taylor Road Transportation Impact & Parking Study Update* completed by Paradigm in February 2024.

Site Traffic Distribution:

- **524 York Road Phase 2, Parcel 6, and Parcel 7**, existing Traffic Patterns.
- **253 Taylor Road**, 2016 Transportation Tomorrow Survey zone 6052 and existing traffic patterns (consistent with *White Oaks Village, 253 Taylor Road Transportation Impact & Parking Study Update* completed by Paradigm in February 2024).

Remedial Measures:

- Left-turn lane warrants;
- Intersection improvements; and
- Signal warrants.

Access and Circulation Review:

- AutoTURN assessment.

Report:

- Report documenting the study methodologies, findings, conclusions, and recommendations.

Subject: RE: (240479) 524 York Road – Parcel 6 & 7, TIS

Hi All,

Just looking to clarify the requirements for this study.

Town and Region: Is an individual TIS required for each parcel (Parcel 5 and Parcel 6 & 7)? If so, should the scope of each TIS be limited to the intersections under jurisdiction of the Town and Region?

MTO: Is MD-TIS limited to the intersections under MTO jurisdiction (i.e. the Glendale Avenue & QEW Interchanges)?

Thank you for the clarification,

Drew Cobean

Subject: RE: (240479) 524 York Road – Parcel 6 & 7, TIS

Good Afternoon Drew:

Re: **MTO requires an MD-TIS**

Application Address: **524 York Road (Parcels 5, 6, & 7), Niagara-On-The- Lake, ON (QEW)**

Proposed: **Parcel 5 (10-Storey Hotel & Restaurants)
Parcel 6 (2 8-Storey & 1 25-Storey Bldgs)
Parcel 7 (1 8-Storey & 1 23-Storey Bldgs)**

I had a meeting with our Traffic Department with regards to the multiple developments being proposed. Because concurring developments are proposed within the same area, MTO requires a MD-TIS. MTO understands that NOTL will undertake the MD-TIS and requires that NOTL provide a draft MD-TIS ToR for MTO to review/comment.

MTO has identified 3 developments to be captured in the MD-TIS, which are:

1. 524 York Road (Parcel 5), being a 10-storey Hotel and 2 Restaurants,
2. 524 York Road (Parcels 6 & 7 Combined), being 5 Mixed-Use Towers, and
3. 253 Taylor Road (Mixed-Use development with 4 Towers ranging from 18-25 storeys with 810 units).

MTO is also requesting that NOTL captures other **potential** developments within MTO's permit control area to be included in the MD-TIS.

In the meantime, MTO waits for the draft MD-TIS ToR to provide comments on.

Regards,

Usama Ali

Subject: FW: (240479) 524 York Road – Parcel 6 & 7, TIS

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Hi Drew,

Our Transportation group has reviewed the terms of reference and added comments below in red.

It was noted that the concept plan shows a roundabout at York Rd & Townline Rd. The Region has a screening process for potential roundabouts, and as a first step the TIS should include a traffic signal warrant analysis for that intersection.

If you require any regional traffic data, a request can be made online using the following link: <https://www.niagararegion.ca/living/roads/permits/traffic-data-requests.aspx>. If the TIS determines improvements are required at any regional roads or intersections as a result of development traffic, a functional design will need to be submitted to the Region for review and approval.

Let me know if you have any questions or concerns.

Thanks,

Josh Wilson, P.Eng

Subject: (240479) 524 York Road – Parcel 6 & 7, TIS

**Niagara Region
Security Warning:**

This is an external email, use caution when opening attachments or clicking links

Greetings,

Paradigm has been retained to conduct a Transportation Impact Assessment for a proposed mixed-use development located in Niagara-on-the-Lake. Parcel 6 is located at the northwest corner of York Road and Townline Road and Parcel 7 is located at the southwest corner of York Road and Townline Road.

Parcel 6 is proposing 744 residential units and 4,330 m² of retail/commercial uses and Parcel 7 is proposing 541 residential units, for a total of 1285 residential units. Vehicle access for Parcel 6 is proposed via two driveway connections to Townline Road, and vehicle access to Parcel 7 is proposed via a single driveway connection to York Road.

We'd like to prepare our report based on the following scope, subject to your comments:

PROPOSED TERMS OF REFERENCE

Study Area Intersections:

- Glendale Avenue at York Road (roundabout);
- York Road at Counsell Street (unsignalized);
- York Road at Townline Road (unsignalized);
- QEW at Glendale Avenue North Ramp (signalized); and
- QEW at Glendale Avenue South Ramp (signalized).

Analysis Periods:

- Weekday AM peak hour;
- Weekday PM peak hour; and
- Saturday peak hour.

Existing Data:

- TMCs to be collected by Paradigm.

Horizon Year:

- Existing conditions;
- Opening year;
- Five years post full build-out; and
- Ten years post full build-out.

If the development will be built in multiple phases, the study should include capacity analysis at the end of each phase, additional to the ultimate buildout year and the 5 &

10 years after buildout.

Capacity Analysis:

- Synchro 12, HCM 2000.

Background Traffic

- Background traffic annual growth rate. 1% **Please confirm**

The Region's forecasting EMME model recommends using an annual growth rate of 2%.

- Any additional developments identified. **Please confirm**

Trip Generation:

- ITE Trip Generation Data 11th Edition estimates for the AM, PM, and Saturday peak hours with no modal split reductions.

Site Traffic Distribution:

- Existing Traffic Patterns

Remedial Measures:

- Left-turn lane warrants; and
- Signal warrants.

Access and Circulation Review:

- AutoTURN assessment.

Report:

- Report documenting the study methodologies, findings, conclusions, and recommendations.

Additional comments:

- The TIS to evaluate intersection alternatives at York Road (RR81) and Townline Road based on the capacity analysis results.
- Please follow Niagara Region TIA Guidelines (2023) for traffic analysis software settings, intersections capacity thresholds and other requirements. The guidelines are accessible at:
 - <https://www.niagararegion.ca/business/default.aspx?topnav=1>

Thanks,

Drew Cobean

RE: DECLARATION OF RESPONSIBILITY – VISSIM TRAFFIC SIMULATION MODEL AND ANALYSIS

We, **Paradigm Transportation Solutions Limited (Paradigm)**, hereby declare that we have prepared, calibrated, validated, and applied the VISSIM microscopic traffic simulation model and associated operational analysis for this assignment and accept responsibility for the model and its outputs.

Paradigm confirms that the traffic simulation model has been developed, operated, and documented in general conformance with the **Ministry of Transportation of Ontario (MTO) Traffic Simulation Protocol (April 2021)**, including but not limited to requirements related to model scope, planning horizons, analysis periods, demand inputs, simulation resolution, calibration, validation, sensitivity testing, and reporting.

Specifically, Paradigm accepts responsibility for:

- ▶ The overall structure, configuration, and geographic extent of the VISSIM model;
- ▶ The preparation and application of traffic demand inputs, assumptions, and vehicle classifications;
- ▶ The selection and application of simulation parameters, including any calibrated values;
- ▶ The execution of model replications, warm-up periods, and analysis periods;
- ▶ The calibration and validation of traffic volumes, speeds, and travel times;
- ▶ The preparation of the Model Calibration and Validation Report (MCVR);
- ▶ The interpretation of simulation outputs, findings, and conclusions relied upon for decision-making; and

We further confirm that the simulation results, conclusions, and recommendations presented in the associated submissions represent our professional judgment based on the data available at the time of analysis and the application of accepted traffic engineering practice.

This declaration is provided for the purpose of review and reliance by the Ministry of Transportation of Ontario and other approving agencies in connection with traffic operations and impact assessments affecting MTO facilities.

Yours very truly,

PARADIGM TRANSPORTATION SOLUTIONS LIMITED

Your Statement and Diagram - Use one of these diagrams to help describe your collision by drawing it in the space below.

Diagram 1: Rear End, Diagram 2: Head On, Diagram 3: Side Swipe, Diagram 4: Side Swipe, Diagram 5: Overtaking, Diagram 6: Right Turn, Diagram 7: Left Turn, Diagram 8: Intersection 90°, Diagram 9: Fixed Object

Your Statement - Describe the collision. Give details about your estimated speed, direction of travel, your actions and the other vehicle's actions.

Approximate Speed

Your Diagram - Show the position of the vehicles at time of impact.

Diagram showing Townline Rd and York Rd intersection with vehicle positions.
