

Sassafras Farms

Growing Naturally

**Ecological Consulting and Restoration
Native Seeds and Plants**

Project: Walker's Creek Slope Stabilization

Customer: City of St. Catharines

Description: Collected, prepared and installed all bioengineering material from local native stock for brush mattresses, fascines and live stakes. Objectives of project included bank stabilization, habitat creation, and spawning bed health enhancement for local trout populations.

Date: Spring of 2011

Project: Beaver's Creek Habitat Restoration for Species at Risk

Customer: City of Fort Erie

Description: Collected, prepared and installed all bioengineering material from local native stock for brush mattresses, fascines, live stakes, crib wall and brush layers. Collected and provided herbaceous seed for riparian areas. Grew and installed local native trees, shrubs and herbaceous species for habitat enhancement. The portion of this project Sassafras Farms was involved with included habitat creation for two species at risk: grass pickerel and wood turtle. As well, there were numerous installations of bioengineering material to help with soil stabilization and habitat enhancements.

Date: Winter of 2011-Spring of 2012
