## 1.0 Introduction

C.F. Crozier & Associates Inc. (Crozier) was retained by Kaneff Group to prepare a Functional Servicing and Stormwater Management Report. This report will support the Draft Plan of Subdivision required to permit the industrial development at 353 Townline Road in the Town of Niagara-on-the-Lake, Region of Niagara (proposed development/site).

This report will demonstrate how the proposed development servicing and stormwater management will integrate with the area's existing water, sanitary, and stormwater infrastructure.

The reports and design standards referenced during the preparation of this report includes:

- Niagara-on-the-Lake – Municipal Engineering Standards (November 2020)
- Niagara Region Stormwater Management Guidelines (December 2022)
- Niagara Region – Glendale Secondary Plan Update (December 2022)
- Niagara Peninsula Conservation Authority - Stormwater Management Guidelines
- Ministry of the Environment - Stormwater Management Planning and Design Manual (March 2003)
- Fire Underwriters Survey - Water Supply for Public Fire Protection (2020)

Additional background and supporting information used to inform this functional servicing and stormwater management report also includes:

- Draft Plan of Subdivision, Part of Lot 180 and 181 (Geographic Township of Niagara) now in the Town of Niagara on the Lake, Regional Municipality of Niagara, by Kaneff, dated December 5, 2023.
- Scoped Environmental Impact Study, by Colville Consulting Inc, dated December 2023.
- Slope Stability Assessment, by Soil Engineers Ltd, dated December 13, 2023.
- Preliminary Slope Stability Assessment, by Bendigo Consulting Inc, dated February 12, 2021.
- Geotechnical Investigation Report, by Bendigo Consulting Inc, dated December 22, 2020.

## 2.0 Site Description

The existing site is approximately 11.34 ha of vacant greenfield. The property is located in a mixed-use industrial and residential neighbourhood and is bounded by residential properties to the north, a Niagara Peninsula Conservation Authority (NPCA) regulated watercourse to the east, industrial properties to the south, and Townline Road to the west. The site also contains a smaller watercourse which receives stormwater flows from the development immediately to the south and conveys runoff northward through the adjacent residential.

The elements envisioned for this development per the Draft Plan include:

- 4 Industrial Blocks (Blocks 1, 2, 3, 4)
- 20.0m ROW – Northwood Court including cul-de-sac bulb.
- A stormwater management (SWM) pond (Block 5)
- Additional blocks to delineate Natural Heritage Systems (NHS), associated buffers, and reserves (Blocks 6-9)

The Site is located within the Glendale District Plan area. Therefore, the Niagara Region – Glendale Secondary Plan Update (December 2022) design criteria was used to determine the equivalent population estimate for the proposed development. Table 1 summarizes the proposed development population.

**Table 1: Equivalent Population Estimate**

<b>Blocks</b>	<b>Area (ha)</b>	<b>Pop. Density (persons and jobs/ha)</b>	<b>Population</b>
Block 1	1.51	100	164
Block 2	2.19	100	242
Block 3	2.51	100	251
Block 4	1.52	100	166
Blocks 5-9 + ROW	3.61	0	0
<b>Total</b>	<b>11.34</b>	<b>-</b>	<b>773</b>

The proposed site is estimated to generate a population of approximately 773 persons/jobs. This population estimate will be utilized for the calculation of water and sanitary demand generated by the individual blocks and overall development.

### 3.0 Water Servicing

#### 3.1 Existing Water Servicing

A review of the available Niagara-on-the-Lake record drawings indicates that:

- There is an existing 300 mm diameter PVC DR18 watermain on the east boulevard of Townline Road.
- An existing hydrant on the east boulevard of Townline Road.
- There is an existing 200 mm diameter PVC DR 18 on Westwood Court

Refer to Appendix A for applicable record drawings.

#### 3.2 Design Water Demand

The estimated water demand for the proposed development was calculated using an average daily water demand of 270 L/employee/day, a maximum day factor of 2.0, and a peak hour factor of 3.0 per the Niagara Region – Glendale Secondary Plan Update (December 2022) design criteria.

Table 2 summarizes the estimated domestic water demand and Appendix A contains detailed water demand calculations.

**Table 2: Estimated Domestic Water Demand**

<b>Blocks</b>	<b>Average Daily Demand (L/d)</b>	<b>Maximum Day Demand (L/s)</b>	<b>Peak Hour Demand (L/s)</b>
Block 1	40,770	0.9	1.4
Block 2	59,130	1.4	2.1
Block 3	67,770	1.6	2.4
Block 4	41,040	1.0	1.4
<b>Total</b>	<b>208,710</b>	<b>4.8</b>	<b>7.2</b>

Using Niagara Region design criteria for water demand, the peak hour domestic demand for the entire site is 7.2 L/s.

#### 3.3 Fire Flow Demand

Based on the Niagara Region – Glendale Secondary Plan Update (December 2022) design criteria, the fire line for proposed development is required to accommodate a minimum fire flow of 250 L/s. Please note that the Mechanical Engineer will prepare the detailed fire protection calculations for the proposed building concepts.

#### 3.4 Proposed Water Servicing

Block 1 of the development is proposed to be serviced by direct service connection to the existing 300 mm diameter watermain within Townline Road. Blocks 2-4 will be serviced by a new 200mm diameter PVC watermain constructed in the proposed Northwood Court ROW. It will connect to the existing 200mm diameter watermain in Westwood Court to the south.

The Servicing Plan (C103) illustrates the location of the existing and proposed water services and connections.

## 4.0 Sanitary Servicing

### 4.1 Existing Sanitary Servicing

A review of the available Niagara-on-the-Lake record drawings indicates that:

- There is an existing 525 mm diameter PVC sanitary sewer within Townline Road.
- There is an existing 250 mm diameter PVC sanitary sewer within Westwood Court.

Refer to Appendix A for applicable record drawings.

### 4.2 Design Sanitary Flow

The sanitary flow for the proposed development was calculated with reference to the Niagara Region – Glendale Secondary Plan Update (December 2022) design criteria and the equivalent population estimate described in Section 4.3. Region of Peel design criteria unit sewage flow of 270 L/person/day was used to determine the average daily flow. Infiltration flow into the sanitary sewer and a peaking factor were applied to the unit sewage flow to obtain the total estimated design sewage flow.

A summary of the results is presented in Table 3 and detailed calculations are provided in Appendix B.

**Table 3: Estimated Sanitary Design Flows**

<b>Blocks</b>	<b>Average Daily Flows (L/d)</b>	<b>Peak Flow (L/s)</b>	<b>Infiltration (L/s)</b>	<b>Total Sanitary Flow (L/s)</b>
Block 1	41,525	1.9	0.43	2.3
Block 2	60,225	2.7	0.63	3.3
Block 3	69,025	3.1	0.72	3.8
Block 4	41,800	1.9	0.43	2.3
ROW	0	0.0	0.17	0.2
<b>Total</b>	<b>212575</b>	<b>9.5</b>	<b>2.2</b>	<b>11.9</b>

Using Niagara Region design criteria for sanitary demand, the peak sanitary flow for the entire site is 11.9 L/s.

### 4.3 Proposed Sanitary Servicing

Sanitary servicing for Block 1 will be provided by a 200 mm diameter sanitary service connecting to the existing 525 mm diameter sanitary sewer on Townline Road. Sanitary servicing for Blocks 2-4 will be provided by a 200 mm diameter sanitary sewer constructed in proposed Northwood Court ROW. It will connect to the existing 250 mm diameter sanitary sewer on Westwood Court to the south.

The Servicing Plan (C103) illustrates the location of the existing and proposed sanitary services.

## 5.0 Grading and Drainage Conditions

The drainage patterns for pre-development and post-development conditions are outlined in the following sections.

### 5.1 Existing Drainage Conditions

There are two outlets to the site, identified as:

1. Unnamed Tributary – located in the central/western portion of the site which conveys stormwater runoff from the property immediately to the south. Traverses from south to north crossing Queenston Road via 600 mm x 600 mm box culvert and eventually discharging into Six Mile Creek.
2. Six Mile Creek – located along the eastern limit of the site, travelling from south to north and crossing Queenston Road via 3600 mm x 2400 mm box culvert.

The site is split between two catchments that convey runoff to each of these outlets. The majority of the existing Site sheet flows northwest to the Unnamed Tributary. A smaller portion of the Site sheet flows easterly to the Six Mile Creek watercourse. These two catchments are identified as Catchment 101 and 102. Refer to Table 4 below and Figure 1 for Pre-development drainage catchment plan.

**Table 4: Pre-development Drainage Summary**

Catchment ID	Area (ha)	Outlet	Description
101 – Unnamed Tributary	7.56	Unnamed Tributary	Grassy meadow, vacant
102 – Six Mile Creek	1.67	Six Mile Creek	Grassy meadow, vacant
<b>Total</b>	<b>9.23</b>	-	-

It is noted that the NHS buffer line along Six Mile Creek watercourse is used as the catchment limit of area 102. This is because in post-development, no area east of this buffer limit is intended to be developed and will remain 'as-is', which is why the Total catchment area of 9.23 ha is less than the total Site area of 11.34 ha.

### 5.2 Proposed Drainage Conditions

The proposed drainage conditions for the site generally follow the strategy identified in Figure 4-1 in the Glendale Industrial Area Stormwater Management Master Plan (Town of Niagara-on-the-Lake, 2011). Based on Figure 4-1 (refer to Appendix C), a proposed Stormwater Management Pond shall provide quantity control for the majority subject site.

Mimicking the existing drainage conditions, two outlets are proposed: the Six Mile Creek and the Unnamed Tributary. Block 1 will outlet independently to the unnamed tributary. Blocks 2-4 and the proposed ROW will outlet to the Six Mile Creek via SWM Pond. Storm sewers in the ROW are designed to convey the minor 5-year storm event based on Niagara-on-the-Lake engineering standards. The ROW itself is designed to convey major runoff from events up to the 100-year to the SWM Pond.

All proposed buildings will implement rooftop storage to minimize the public SWM pond and storm sewer sizing requirements. There is also a portion of perimeter at-grade areas which will effectively be landscaped (ie: primarily pervious area) that cannot be captured, and will therefore drain uncontrolled to their respective outlets based on the predevelopment condition.

Table 5 summarizes the post-development drainage catchments.

**Table 5: Post-development Drainage Summary**

Catchment ID	Area (ha)	Outlet	Description
201	1.25	Unnamed Tributary	Block 1: building with rooftop controls and captured at-grade area. Direct outlet to unnamed tributary.
UC01	0.78		Watercourse and perimeter portions of Block 1 and 2, uncaptured and uncontrolled. Direct overland flow to unnamed tributary.
202	2.75	Six Mile Creek	Block 2 and Block 3A: buildings with rooftop controls and captured at-grade areas. Including portion of Northwood Court ROW. All draining to SWM Pond.
203	3.27		Block 3B and Block 4: buildings with rooftop controls and captured at-grade areas. Including portion of Northwood Court ROW. All draining to SWM Pond.
204	0.68		Public SWM Pond Block. Outlet to Six Mile Creek.
UC02	0.50		Perimeter portions of Block 2 and 4, uncaptured and uncontrolled. Direct overland flow to Six Mile Creek.
<b>Total</b>	<b>9.23</b>		

Refer to the Site Servicing Plan (C102), Site Grading Plan (C103) and the Post-development Drainage Plan (Figure 2).

It is also noted that through coordination and discussion with the Town and NPCA, the proposed SWM pond will not provide quantity control for the external/off-site drainage areas (3.90 ha and 10.7 ha) which was originally identified in Figure 4-1. The external drainage area has already been designed, developed, and implemented with stormwater management strategies since the 2011 Glendale Industrial Area Stormwater Management Master Plan was published.

## 6.0 Stormwater Management

The stormwater management strategy for the site shall adhere to the design guidelines for the Town of Niagara-on-the-Lake, the NPCA, and the Ministry of the Environment, Conservation and Parks. Stormwater management design criteria for the proposed development are established in accordance with the following documents:

- Municipal Engineering Standard, Niagara-on-the-Lake (January 2018)
- Stormwater Management Guidelines, Niagara Peninsula Conservation Authority (Jan 2020)
- Stormwater Management Planning and Design Manual, MOE (Mar 2003)
- Glendale Industrial Area Stormwater Management Master Plan, Town of Niagara-on-the-Lake (June 2021)
- Pre-consultation meeting Comment per Pre-consultation meeting (January 6, 2022)
- Engineering Review Meeting with the Town, Region, and NPCA (June 21, 2023)
- Engineering Review Meeting with the NPCA (August 9, 2023)
- Slope Stability Assessment completed by Soil Engineers Ltd. (December 2023)

The stormwater management design criteria for the site are summarized below:

- Stormwater Conveyance System: Stormwater conveyance within the site must be designed to meet the Town standards. According to the Town criteria, the storm sewer (minor) system must be designed to provide conveyance of runoff from the 10-year design storm for systems.
- Stormwater Quantity Control: Post-development peak flows to be attenuated to the pre-development levels for 2-year up to and including the 100-year design storm event, per Region requirement identified in the pre-consultation meeting.
- Stormwater Quality Control: "Normal" protection level (Stormwater Management Planning and Design Manual, Ministry of the Environment dated March 2003) for the developed portion of the site (70% total suspended solids removals), per Region requirement identified in the pre-consultation meeting.
- Erosion Control: Capture and release stormwater runoff from 25mm design storm event over a period of 24 hours, per Region requirement identified in the pre-consultation meeting.

A description of the design approach to satisfy these criteria is included in the following sections.

## 6.1 Quantity Control

Pre and Post-development storm catchments are identified in Figure 1 and Figure 2 at the end of this report. Runoff Coefficients are assigned to each catchment per Niagara-on-the-Lake Municipal Engineering Standards. These are summarized in Table 6.

**Table 6: Summary of Storm Catchments**

Catchment ID	Description	Total Area (ha)	Runoff Coefficient
<b>Predevelopment</b>			
101	Landscape	7.56	0.25
102	Landscape	1.67	0.25
Total		9.23	0.25
<b>Postdevelopment</b>			
201	Industrial Block	1.25	0.70
202	Industrial Block	2.75	0.70
203	Industrial Block	3.27	0.70
204	SWM Pond	0.68	0.50
UC01	Landscape	0.78	0.25
UC02	Landscape	0.50	0.25
Total		9.23	0.62

A Visual Otthymo (VO) model was developed to quantify the peak flows from the site based on the above catchments. Parameters were assigned to each catchment based on the existing soil type, percent of impervious cover, and grading for the site. Block catchments were also combined based on outlet (for model simplicity) or split based on roof vs. at-grade areas. The following Table 7 summarizes the VO model catchment parameters.

**Table 7: Summary of VO Model Parameters**

Catchment ID	Description	Total Area (ha)	Pervious Area (ha)	Impervious Area (ha)	CN	TIMP	XIMP	IA (mm)	Tp (hr)
<b>Existing Drainage</b>									
101		7.56	7.56	0.00	71	-	-	8.0	0.43
102		1.67	1.67	0.00	65.8	-	-	9.7	0.53
<b>Proposed Drainage</b>									
201A	At-Grade	0.58	0.12	0.46	80	80	60	5.0	-
201B	Roofs	0.67	0.67	0.00	99	99	99	1.0	-
202/203A	At-Grade	2.77	0.55	2.22	80	80	60	5.0	-
202/203B	Roofs	3.25	3.25	0.00	99	99	99	1.0	-
204	SWM Pond	0.68	0.34	0.34	71	50	50	5.0	-
UC01		0.78	0.78	0.00	70.7	-	-	8.1	0.31
UC02		0.50	0.50	0.00	65	-	-	10.0	0.24

Notes: Roof areas are preliminary estimates at 55% of total block area.

Block at-grade areas %IMP of 80% is more conservative than C=0.70 per Table 6.

The VO model was run using 3-hour Chicago design storms based on the Niagara-on-the-Lake IDF equations to calculate the pre-development and post-development (without quantity controls) peak flows of the site. A schematic of the pre-development and post-development VO model can be found in Appendix C.

Table 8 and Table 9 summarize the flow results when no quantity controls are implemented.

**Table 8: Unnamed Tributary Flow Summary**

Return Period	Predevelopment (Allowable) Rate (m <sup>3</sup> /s)	Post-Development Uncontrolled (m <sup>3</sup> /s)
2-year	0.0749	0.1990
5-year	0.1133	0.2497
10-year	0.1462	0.2841
25-year	0.2004	0.3351
50-year	0.2461	0.3755
100-year	0.2983	0.4172

**Table 9: Six Mile Creek Flow Summary**

Return Period	Predevelopment (Allowable) Rate (m <sup>3</sup> /s)	Post-Development Uncontrolled (m <sup>3</sup> /s)
2-year	0.0104	1.0302
5-year	0.0162	1.2890
10-year	0.0213	1.4645
25-year	0.0299	1.7232
50-year	0.0372	1.9275
100-year	0.0456	2.1375

As can be seen by the results of both outlets, the uncontrolled post-development rates exceed the predevelopment (allowable) rates in all scenarios for both outlets. Therefore, quantity controls will be required for both outlets to reduce the post-development rates to the predevelopment allowable.

Stormwater quantity controls will be implemented in the form of:

- i) Rooftop storage and rooftop controls in each private Block, and
- ii) A public stormwater management (SWM) pond facility.

In Block 1, rooftop storage/control alone will provide the required attenuation and storage to meet predevelopment (allowable) release rates. In Blocks 2-4, rooftop storage/controls will minimize the peak runoff rate discharging from each Block, thereby minimizing both the size of public storm sewers in Northwood Court and the area and volume of the SWM Pond facility.

The SWM Pond is proposed to provide quantity control, quality control, and erosion mitigations for the catchments 202, 203, and 204 (Blocks 2-5) and will outlet to Six Mile Creek. It will be sized with controls to meet the predevelopment (allowable) release rate to the Six Mile Creek.

Table 10 summarizes the preliminary rooftop controls provided for each Block. Detailed calculations are provided in Appendix C.

**Table 10: Rooftop Controls Summary**

Block ID	Building ID	Roof Area (ha)	Provided Roof Storage Volume (ha-m)	Max Discharge Rate (m <sup>3</sup> /s)
Block 1	1	0.67	0.070	0.004
Block 2	2	0.97	0.102	0.008
Block 3	3A	0.62	0.065	0.004
Block 3	3B	0.62	0.065	0.004
Block 4	4	1.04	0.110	0.008

Notes: Roof areas are preliminary estimates at 55% of total block area.  
Roof volumes are based on a maximum ponding depth of 0.15m and 70% roof area usage.

Table 11 summarizes the SWM Pond storage provided and associated discharge rate. A total volume of 3937 m<sup>3</sup> is provided before the emergency spillway elevation is reached.

**Table 11: SWM Pond Stage-Storage Discharge Summary**

Elevation	Datum	Provided Storage (ha-m)	Discharge Rate (m <sup>3</sup> /s)
115.00	Permanent Pool	0.0000	0.0000
115.30		0.0452	0.0009
115.50	Extended Detention	0.0810	0.0050
115.75		0.1322	0.0180
116.00	100-yr HWL	0.1908	0.0420
116.25		0.2567	0.0470
116.70	Emergency Spillway	0.3937	0.0560

Table 12 and Table 13 summarize the post-development flows and storage requirements for each outlet based on the VO model results. Refer to Appendix C for full model output and details.

**Table 12: Unnamed Tributary Post-Development Controlled Flows and Storage Summary**

Return Period	Target (Allowable) Rate (m <sup>3</sup> /s)	Post-Development (Controlled) Peak Discharge Rate (m <sup>3</sup> /s)	Roof Storage Required (ha-m)	Roof Storage Provided (ha-m)
2-yr	0.0749	0.0733	0.022	0.070
5-yr	0.1133	0.0983	0.026	0.070
10-yr	0.1462	0.1137	0.029	0.070
25-yr	0.2004	0.1370	0.034	0.070
50-yr	0.2461	0.1557	0.037	0.070
100-yr	0.2983	0.1754	0.041	0.070

**Table 13: Six Mile Creek Post-Development Controlled Flows and Storage Summary**

Return Period	Target (Allowable) Rate (m <sup>3</sup> /s)	Post-Development (Controlled) Peak Discharge Rate (m <sup>3</sup> /s)	Roof Storage Required (ha-m)	Roof Storage Provided (ha-m)	SWM Pond Storage Required (ha-m)	SWM Pond Storage Provided (ha-m)
2-yr	0.0104	0.0077	0.1044	0.3410	0.0935	0.3937
5-yr	0.0162	0.0129	0.1244	0.3410	0.1120	0.3937
10-yr	0.0213	0.0170	0.1398	0.3410	0.1264	0.3937
25-yr	0.0299	0.0240	0.1626	0.3410	0.1473	0.3937
50-yr	0.0372	0.0308	0.1796	0.3410	0.1624	0.3937
100-yr	0.0456	0.0381	0.1980	0.3410	0.1786	0.3937

As can be seen from the tables above, by incorporating rooftop storage and controls within each Block, and providing a minimum of 1786m<sup>3</sup> of storage within the SWM Pond, peak flows from the proposed development can be attenuated to predevelopment rates.

The SWM Pond outlet structure will be provided and designed in the detailed design stage. Refer to preliminary pond drawings C104 and C105. The outlet structure will typically consist of a submerged reverse-flow pipe for extended detention control and an elevated larger pipe for outlet of storm events up to the 100-year. The emergency inlet and outlet spillways are designed for 100-year peak flows for emergency conditions such as storms beyond 100-year storm events, sewer blockage, or outlet failures.

## 6.2 Stormwater Quality Control

The stormwater quality controls are required to provide “normal level protection”, (i.e. 70% total suspended solids removal) for the site.

For drainage areas outletting to the Six Mile Creek (catchment 202, 203, 204), the quality control will be achieved through the permanent pool and forebay component of the proposed SWM pond. Detailed permanent pool sizing calculations are provided in Appendix C. Results are summarized in Table 14.

**Table 14: SWM Facility Water Quality Storage Volume**

<b>SWM Component</b>	<b>Values</b>
Total Contributing Drainage Area (ha)	7.27
Percent Imperviousness of Drainage Area (%)	85
Required PP Storage Volume <sup>1,2</sup> (m <sup>3</sup> /ha)	110
Required PP Storage Volume <sup>2</sup> (m <sup>3</sup> )	800
<b>Provided PP Storage Volume<sup>2</sup> (m<sup>3</sup>)</b>	<b>1,338</b>

Note:

1. Required PP storage volumes interpolated from Table 3.2 of MECP SWM Planning and Design Manual (2003) based on upstream impervious area.
2. PP denotes Permanent Pool.

As demonstrated in Table 14, the provided permanent pool storage volume exceed the required storage volume, meeting the stormwater quality control requirements. Table 15 summarizes the forebay design for the proposed SWM pond to meet the criteria outlined by the MECP.

**Table 15: SWM Facility Forebay Sizing Summary - Six Mile Creek**

<b>Design Criteria</b>	<b>Target</b>	<b>Provided</b>
Forebay Length (Settling Calculation)	Minimum 7.6 m	25 m
Forebay Length (Dispersion Calculation)	Minimum 11 m	25 m
Forebay Bottom Width	Minimum 1.4 m	11.6 m
Length to Width Ratio	Minimum 2:1	3 : 1
Average Forebay velocity	Maximum 0.50 m/s	0.09

Note: The provided forebay length is measured from the forebay berm to the closest inlet to be conservative.

For Block 1 outletting to the unnamed tributary (catchment 201), incorporation of a treatment-train and oil-grit separator will be provided and further detailed at the detailed design stage.

### 6.3 Erosion Control

Based on the Region's requirement identified in the pre-consultation meeting, the erosion control criteria is to capture and release stormwater runoff from a 25 mm design storm event over 24 hours.

For the drainage areas outletting to the Six Mile Creek (catchments 202, 203, and 204), the erosion control will be achieved through the extended detention component of the proposed SWM pond. Table 16 summarizes the extended detention requirements of the SWM pond.

**Table 16: SWM Facility Erosion Control Storage Volume**

<b>SWM Component</b>	<b>Storage Volume</b>
Required ED Storage Volume <sup>1</sup> (m <sup>3</sup> /ha)	40
Required ED Storage Volume <sup>1</sup> (m <sup>3</sup> )	291
Required ED Storage Volume <sup>2</sup> (m <sup>3</sup> )	821
<b>Provided ED Storage Volume (m<sup>3</sup>)</b>	821

Notes: 1. Volume based on MECP SWM Planning and Design Manual (2003).  
2. Volume calculated based on 25mm runoff from VO model.

Regarding the discharge location of the SWM pond to the Six Mile Creek, the primary outlet has been designed as a spillway at 2% slope to match into the existing watercourse bank. The spillway is intended to distribute/spread out runoff over a width of approximately 5m before matching to the existing watercourse bank. Runoff will then flow over the existing watercourse bank which is at a 3:1 slope – refer to drawing C105. This existing slope has been reviewed by Soil Engineers Ltd in their Slope Stability Assessment and has been deemed acceptable and meets the minimum required Factor of Safety.

Vegetative silt socks are proposed along the spillway and other erosion protection measures can be reviewed at the detailed design stage. Also refer to the Slope Stability Assessment for further discussion of 'Risk Management of the Slope'.

For Block 1 outletting to the unnamed tributary (catchment 201), erosion control can be achieved through the first 5 mm runoff on-site retention or 25 mm extended detention over 24 hours. The on-site retention can be achieved via infiltration, rooftop storage, green roof, water reuse, etc.

**Table 17: Erosion Control for Unnamed Tributary Catchment**

<b>Catchment 201 Imp Area (ha)</b>	<b>Required Volume based on 5 mm storm event (m<sup>3</sup>)</b>	<b>Required Volume on 25 mm storm event (m<sup>3</sup>)</b>
1.25	62.5	312.5

### 7.0 Erosion and Sediment Control During Construction

Erosion and sediment controls (ESC) will be installed prior to the start of any construction activities and will be maintained until the proposed development is stabilized or as directed by the Site Engineer or the Town of Niagara-on-the-Lake. The Removals, Erosion & Sediment Control Plan (C101) identifies the location of the recommended control features.

### Sediment Control Fencing

Sediment control fencing will be installed on the perimeter of the proposed development to intercept sheet flow. Based on field decisions, the Site Engineer and the Owner may add additional sediment control fencing prior to, during, and following construction.

### Rock Mud Mat

A rock mud mat will be installed at the entrance to the construction zone in order to prevent mud tracking from the proposed development onto the surrounding lands and perimeter roadway network. All construction traffic will be restricted to this access only.

### Sediment Control for Catchbasins

Sediment control silt sacks will be installed in the existing nearby storm sewer catch basins. The silt sacks will provide sediment control to prevent silt and sediment from entering the stormwater system.

## **8.0 Conclusion and Recommendations**

The proposed development consists of four industrial blocks, a stormwater management pond, and a 20m ROW (Northwood Court) with connection to existing Westwood Court. Based on the information provided in this report, the proposed development can be feasibly serviced and meet the stormwater management criteria of the Town of Niagara-on-the-Lake, Niagara Region, and Niagara Peninsula Conservation Authority.

The following is a summary of the proposed functional servicing and stormwater management concepts for the site:

- A new 200mm watermain will be constructed in Northwood Court from the existing 200mm watermain in Westwood Court to service Blocks 2-4. Block 1 will be provided with a direct water service connection to the existing 300mm watermain in Townline Road.
- A new 200mm sanitary sewer will be constructed in Northwood Court and connect to the existing 250mm sanitary sewer in Westwood Court to service Blocks 2-4. Block 1 will be provided with a direct sanitary service connection to the existing 525mm sanitary sewer in Townline Road.
- Storm drainage from the site is split between two watercourse outlets. The post-development condition will mimic the predevelopment drainage pattern and utilize both outlets. Block 1 will discharge directly to the Unnamed Outlet watercourse. Blocks 2-4 will discharge to Northwood Court ROW storm sewers which will outlet to the SWM Pond (Block 5) which will discharge to Six Mile Creek watercourse.
- Stormwater quantity will be achieved through implementation of rooftop controls in each of Blocks 1-4 and a public SWM Pond facility (Block 5). Post-development peak discharge rates will be restricted to pre-development rates based on each outlet.
- Stormwater quality will be achieved for Block 1 through use of train-treatment method and Low Impact Development practices (such as infiltration, swales, oil-grit separator, etc). Runoff from Blocks 2-4 will be treated for quality by the SWM pond prior to discharge to the Six Mile Creek watercourse.

Based on the above conclusions, we recommend the approval of the proposed industrial development Draft Plan for the from the perspective of servicing and stormwater management.

Respectfully submitted,

**C.F. CROZIER & ASSOCIATES INC.**

- NOTES**
- 1) THE POSITION OF ALL POLE LINES, CONDUITS, WATERMANS, SEWERS AND OTHER UNDERGROUND UTILITIES AND STRUCTURES ARE NOT NECESSARILY SHOWN AND, WHERE SHOWN, THE ACCURACY OF THE LOCATION SHOWN OF SUCH UTILITIES IS NOT GUARANTEED. BEFORE STARTING WORK, THE CONTRACTOR SHALL CONTACT ALL SUCH UTILITIES INVOLVED AND INFORM HIMSELF AS TO THE EXACT LOCATION OF ALL SUCH UTILITIES AND STRUCTURES AND SHALL ASSUME LIABILITY FOR DAMAGE TO THEM.
  - 2) ALL MEASUREMENTS ARE IN METRES UNLESS OTHERWISE NOTED.
  - 3) ALL WORK SHALL BE IN ACCORDANCE WITH THE RELEVANT SECTIONS OF THE ONTARIO PROVINCIAL STANDARD SPECIFICATIONS AND DRAWINGS AND THE NIAGARA PENINSULA STANDARD CONTRACT DOCUMENT UNLESS OTHERWISE NOTED ON THE DRAWINGS OR IN THE SPECIFICATIONS.
  - 4) COMPUTER DRAWING FILE CO-ORDINATES FOR THIS DRAWING SHALL NOT BE USED FOR CONSTRUCTION LAYOUT UNLESS SPECIFICALLY DIRECTED BY THE ENGINEER.
  - 5) ALL GRANULAR MATERIAL SHALL BE COMPACTED TO 100% STANDARD PROCTOR DENSITY AND ALL NATIVE BACKFILL SHALL BE COMPACTED TO 95% STANDARD PROCTOR DENSITY UNLESS OTHERWISE NOTED. FOR THE UPPER 0.6m BELOW ANY PAVEMENT OR RIGID STRUCTURE, MIN. COMPACTION SHALL BE 98% SPD.
  - 6) ALL SEWERS, LEADS AND LATERALS SHALL HAVE CLASS 'B' BEDDING, GRANULAR 'A' COVER MATERIAL AND NATIVE BACKFILL UNLESS OTHERWISE NOTED.
  - 7) STORM SEWERS TO BE CONCRETE PIPE, CLASS III PER CSA A257.2 WITH CLASS B BEDDING TO OPSD 802.031 AND 802.033 OR RIBBED PVC PIPE PER CSA B182.2 WITH GRANULAR 'A' BEDDING TO OPSD 802.010 AND 802.013 UNLESS OTHERWISE NOTED. CATCHBASIN LEADS TO BE 200mm DR-35 PVC AT 1.0% GRADE UNLESS OTHERWISE NOTED. SUMP PUMP DISCHARGE TO BE 50mm SERIES 160 PVC PIPE. CATCHBASINS TO BE PER OPSD 705.010 WITH GRATE PER OPSD 400.020. CATCHBASIN MANHOLES TO BE PER OPSD 701.010 WITH GRATE PER OPSD 400.020 AND NO SUMP.
  - 8) ALL SANITARY SEWERS SHALL BE DR-35 PVC PIPE. ALL SANITARY LATERALS SHALL BE 150mm DR-28 PVC PIPE. SANITARY MANHOLES TO BE TO OPSD 701.010 WITH WATERTIGHT FRAME & COVER TO OPSD 401.010.
  - 9) ALL CONNECTIONS OF PVC SANITARY SEWER PIPE TO CONCRETE STRUCTURES SHALL BE BY MEANS OF KOR'N SEAL SEALED RUBBER BOOT OR APPROVED EQUAL.
  - 10) A MINIMUM CLEAR HORIZONTAL SEPARATION OF 2.5m SHALL BE MAINTAINED BETWEEN ANY SEWER AND ANY PARALLEL WATERMAIN. A MINIMUM CLEAR VERTICAL SEPARATION OF 0.5m SHALL BE MAINTAINED AT SEWER CROSSINGS UNDER WATERMANS WHEREVER POSSIBLE.
  - 11) ALL WATERMANS SHALL BE PVC CL150 (DR-18) AND HAVE CLASS 'B' BEDDING PER OPSD 802.010 WITH GRANULAR 'A' COVER MATERIAL. MINIMUM COVER OVER WATERMAIN SHALL BE 1.5m. WATER SERVICES SHALL BE 150mm DR-18 (CL-150) UNLESS OTHERWISE NOTED.
  - 12) ALL METAL CROSSSES, TEES, BENDS, VALVES AND OTHER FITTINGS SHALL HAVE CATHODIC PROTECTION CONSISTING OF ZINC ANODE 550-12. ALL HYDRANT ASSEMBLIES SHALL HAVE CATHODIC PROTECTION CONSISTING OF ZINC ANODE 1100-24. CATHODIC PROTECTION TO BE INSTALLED PER OPSD-1109.011.
  - 13) FIRE HYDRANT TO BE FITTED WITH STORZ CONNECTORS.
  - 14) ALL BENDS, TEES, HYDRANTS AND OTHER FITTINGS AS REQUIRED SHALL HAVE THRUST BLOCKS IN ACCORDANCE WITH OPSD 1103.010 AND 1103.020.
  - 15) ALL SEWER LATERALS AND WATER SERVICES SHALL BE INSTALLED TO THE STREETLINE.
  - 16) ALL CURBS SHALL BE UNDERLAIN WITH 100mm PERFORATED FILTER-WRAPPED PVC SUBDRAIN OUTLETTING TO CATCHBASINS OR SWALES.
  - 17) RIPRAP AND GEOTEXTILE INSTALLATION SHALL COMPLY WITH OPSD 511 AND OPSD 810.01. GEOTEXTILE TO BE TERRAFIX 270R OR APPROVED EQUIVALENT.
  - 18) WHERE DISTURBED OR DAMAGED, EXISTING ROADS TO BE REINSTATED WITH 400mm GRANULAR 'A' BASE, 75mm HLB HOT MIX ASPHALT BASE COURSE AND 40mm HLB HOT MIX SURFACE COURSE, OR DEPTHS TO MATCH EXISTING, WHICHEVER IS GREATER. PAVEMENT REINSTATEMENT SHALL COMPLY WITH OPSD 509.010.
  - 19) FILL FOR ROADWAYS, DRIVEWAYS, AND PARKING AREAS TO BE CONSTRUCTED IN ACCORDANCE WITH OPSD 201 IN 150mm THICK LIFTS, USING SUITABLE NATIVE EXCAVATED OR IMPORTED MATERIAL APPROVED BY CONTRACT ADMINISTRATOR AND GEOTECHNICAL ENGINEER. THE SUBSOIL BELOW ANY ROADWAYS OR PARKING FACILITIES SHALL BE PROOF ROLLED AND INSPECTED BY THE GEOTECHNICAL ENGINEER OR HIS DESIGNATE PRIOR TO THE PLACEMENT OF ANY GRANULAR MATERIALS.
  - 20) CONTRACTOR TO OBTAIN EXACT LOCATION OF EXISTING UTILITIES PRIOR TO CONNECTION.
  - 21) WHERE CATCHBASIN LEADS ACROSS ROAD HAVE LESS THAN 1.0m COVER, INSULATION TO BE PROVIDED IN ACCORDANCE WITH NIAGARA PENINSULA STANDARD SPECIFICATIONS.
  - 22) DURING CONSTRUCTION, THE FOLLOWING SEDIMENTATION CONTROL MEASURES SHALL BE INSTALLED AND MAINTAINED:
    - CATCHBASINS SHALL HAVE 600mm DEEP SUMPS AND FILTER CLOTH UNDER THE GRATE
    - SILT FENCE (PER OPSD 219.110) OR STRAW BALES (PER OPSD 219.100) ON THE DOWNHILL SIDE OF TOPSOIL STOCKPILES
    - SILT FENCE ALONG THE NORTH LIMIT OF THE SITE PER OPSD 219.110
    - MUD TRAPS AT ROAD ENTRANCES AND EXITS

NOTES:  
THE POSITION OF POLE LINES, CONDUITS, WATERMAINS, SEWERS AND OTHER UNDERGROUND UTILITIES AND STRUCTURES IS NOT NECESSARILY SHOWN ON THE CONTRACT DRAWING AND, WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES AND STRUCTURES IS NOT GUARANTEED. BEFORE STARTING WORK THE CONTRACTOR SHALL LOCATE HIMSELF OF THE EXACT LOCATION OF ALL SUCH UTILITIES AND STRUCTURES, AND SHALL ASSUME ALL LIABILITY FOR DAMAGE TO THEM.  
ALL WORK IS TO BE CONSTRUCTED TO ONTARIO PROVINCIAL STANDARD SPECIFICATIONS AND DRAWINGS (O.P.S.S. & O.P.S.D.) AND APPROPRIATE MUNICIPAL STANDARDS AND SPECIFICATIONS. IN CASES OF CONFLICT, THE MUNICIPAL REQUIREMENTS HAVE PRECEDENCE.  
INSTALLATION OF P.V.C. WATERMAINS AND SERVICES IS TO INCLUDE CATHODIC PROTECTION AND DETECT TAPE.

### Pond 1 Water Quality Requirements

---

**MOE Stormwater Management Planning and Design Manual, March 2003**

**Per MOE Table 3.2, Wet Pond To Provide 70% TSS Removal - 24hr Drawdown of ED**

Total Storage Volume = 150 m<sup>3</sup>/ha \* based on 85% Impervious Level  
Permanent Pool = 110 m<sup>3</sup>/ha \* based on 85% Impervious Level  
Extended Detention = 40 m<sup>3</sup>/ha \* based on 85% Impervious Level

#### 25 mm Storm - Extended Detention Calculation

Rainfall Depth = 25 mm  
Base Runoff = 25 mm Runoff volume from 25mm VO Model for 7.25 ha drainage area, catchment 202, 203, and 204

---

#### Riverwalk West Quality/Quantity Pond (Pond 1)

Updated

Total Contributing Area = 7.27 ha \*based on Post-development Drainage Plan (Catchments 202 and 203).  
Impervious Level = 85 %

Permanent Pool = 110 m<sup>3</sup>/ha \* 7.27 ha  
= **800 m<sup>3</sup>**

Extended Detention = 40 m<sup>3</sup>/ha \* 7.27 ha  
= **291 m<sup>3</sup>**

Extended Detention = 25 mm \* 7.27 ha  
= **1,818 m<sup>3</sup>**

Total Storage Required = **2,617 m<sup>3</sup>**

### Sediment Forebay Sizing Calculations

#### Method #1 - Settling Calculations

Distance =  $((rQ_p)/V_s)^{0.5}$       Equation 4.5 (MOECP, 2003)  
 $r = 2.22$       Length (25.7) to width(11.6 m) ratio of forebay  
 $Q_p = 0.01 \text{ m}^3/\text{s}$       Peak flow from facility in quality storm in  $\text{m}^3/\text{s}$  (25mm event)  
 $V_s = 0.0003 \text{ m/s}$       Settling Velocity in  $\text{m/s}$

Min Distance = 7.6 m

#### Method #2 - Dispersion Length

Distance =  $(8Q/dV_f)$       Equation 4.6 (MOECP, 2003)  
 $Q = 0.69 \text{ m}^3/\text{s}$       Inlet flowrate in  $\text{m}^3/\text{s}$  (5-year 3hr Chicago) - VO Model  
 $d = 1.00 \text{ m}$       Depth of permanent pool in forebay in m  
 $V_f = 0.50 \text{ m/s}$       Desired velocity in forebay in  $\text{m/s}$

Min Distance = 11.0 m

#### Minimum Width Calculations

Width = Dist / 8      Equation 4.7 (MOECP, 2003)

Min Width = 1.4 m

#### Check - Forebay Area Method

Ensure cross sectional forebay velocity is < 0.15m/s

Forebay width = 11.6 m  
 Forebay depth = 1.0 m  
 Side slopes (H:V) = 5  
 Bottom width = 3.7 m

Cross sectional area = 7.6  $\text{m}^2$   
 Inlet flow rate = 0.69  $\text{m}^3/\text{s}$       Inlet flowrate in  $\text{m}^3/\text{s}$  (5-year 3hr Chicago) - VO Model

Average Velocity = 0.09  $\text{m/s}$       OK

As per MOECP Guidelines (March 2003) average velocity is to be less than, or equal to, 0.15m/s, therefore forebay sizing is appropriate.

1	DRAFT PLAN OF SUBDIVISION 1ST SUBMISSION	2023/DEC/13
0	ISSUED FOR COORDINATION	2023/JUN/14
No.	ISSUE / REVISION	YYYY/MM/DD

**ELEVATION NOTE:**  
ELEVATIONS ARE OF GEODETIC ORIGIN (CGVD:1928-1978) AND ARE DERIVED FROM GNSS OBSERVATIONS AND NATURAL RESOURCES CANADA'S GEOD MODEL HT2.0.

**SURVEY NOTES:**  
SURVEY COMPLETED BY J.D. BARNES LIMITED (2022/SEP/08)  
PROJECT No: 22-16-129-00  
BEARINGS ARE UTM GRID, DERIVED FROM OBSERVED REFERENCE POINTS A AND B, BY REAL TIME NETWORK (RTN) OBSERVATIONS, UTM ZONE 17, NAD83 (CSRS)(2010.0).  
DISTANCES ARE GROUND AND CAN BE CONVERTED TO GRID BY MULTIPLYING BY THE COMBINED SCALE FACTOR OF 0.999597.

**SITE PLAN NOTES:**  
DESIGN ELEMENTS ARE BASED ON SITE PLAN BY PEARCE MCCLUSKEY GROUP  
DATE RECEIVED 2023/FEB/03

**DRAWING NOTES:**  
THIS DRAWING IS THE EXCLUSIVE PROPERTY OF C.F. CROZIER & ASSOCIATES INC. AND THE REPRODUCTION OF ANY PART OF IT WITHOUT PRIOR WRITTEN CONSENT OF THIS OFFICE IS STRICTLY PROHIBITED.  
THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS, LEVELS, AND DATUMS ON SITE AND REPORT ANY DISCREPANCIES OR OMISSIONS TO THIS OFFICE PRIOR TO CONSTRUCTION.  
THIS DRAWING IS TO BE READ AND UNDERSTOOD IN CONJUNCTION WITH ALL OTHER PLANS AND DOCUMENTS APPLICABLE TO THIS PROJECT. DO NOT SCALE THIS DRAWING.  
ALL EXISTING UNDERGROUND UTILITIES TO BE VERIFIED IN THE FIELD BY THE CONTRACTOR PRIOR TO CONSTRUCTION.

1	DRAFT PLAN OF SUBDIVISION 1ST SUBMISSION	2023/DEC/13
0	ISSUED FOR COORDINATION	2023/JUN/14
No.	ISSUE / REVISION	YYYY/MM/DD

**ELEVATION NOTE:**  
ELEVATIONS ARE OF GEODETIC ORIGIN (CGVD:1928-1978) AND ARE DERIVED FROM GNSS OBSERVATIONS AND NATURAL RESOURCES CANADA'S GEOD MODEL HT2.0.

**SURVEY NOTES:**  
SURVEY COMPLETED BY J.D. BARNES LIMITED (2022/SEP/08)  
PROJECT No.: 22-16-129-00  
BEARINGS ARE UTM GRID, DERIVED FROM OBSERVED REFERENCE POINTS A AND B, BY REAL TIME NETWORK (RTN) OBSERVATIONS, UTM ZONE 17, NAD83 (CSRS)(2010.0).  
DISTANCES ARE GROUND AND CAN BE CONVERTED TO GRID BY MULTIPLYING BY THE COMBINED SCALE FACTOR OF 0.999597.

**SITE PLAN NOTES:**  
DESIGN ELEMENTS ARE BASED ON SITE PLAN BY PEARCE MCCLUSKEY GROUP  
DATE RECEIVED 2023/FEB/03

**DRAWING NOTES:**
