RE: Annual Performance Report for Niagara-on-the-Lake Storm Collection System

As required by ECA Number 069-S701, we provide the following Annual Report for the year 2024.

A comprehensive CCTV inspection initiative was implemented to furnish critical insights and mitigate risks associated with storm failures and backups. This endeavor encompassed the inspection of roughly 17,000 m of storm sewers on a 5-year rotation, with an overall project cost estimated at approximately \$100,000.

Cleaned out (removed sediment) from 3 storm water management ponds to restore capacity and ensure they continue to function as designed.

The catch basin cleaning program is on a 3-year cycle to clean and inspect all the catch basins for the Town, with an annual estimated cost of \$60,000.

A consultant has been retained to complete an Operations and Maintenance Manual for the Town's collection system with a completion timeline of March 2025.

Inspected and cleaned 11 Oil & Grit separators owned by the Town.

Completed an annual inspection of all the wet and dry ponds in the Town.

We trust that the Ministry will find this report acceptable for its purposes. Should you have any questions, please feel free to contact the undersigned.

This report will be available on request to members of the public who are served by the Authorized System and will also be available to the public on the Town's website prior to June 1, 2025.

Regards,

A handwritten signature in black ink, appearing to read 'A. Tuhmazi'. The signature is written in a cursive style with a prominent horizontal stroke at the top.
